Knowledge Economy Society

12th International Scientific Conference
of the College of Management and Quality Sciences

Conference Proceedings
Student's poster session

Edited by
Zofia Gródek-Szostak, Janusz Nesterak,
Agata Niemczyk, Wojciech Szymla
One of the challenges facing the modern academic teacher is to instill in students the idea of scientific work and to point them to the possibility of gaining first professional experience by active participation in the student scientific movement.

Conferences have been and remain an important element of the scientists’ professional activity. They are an important forum that connects the research community and serves as a platform for disseminating knowledge and establishing cooperation. In the era of rapid technological changes that fundamentally affect how the research community interacts and communicates, scientific conferences remain important checkpoints in creating scientific networks, transferring knowledge and, as a result, developing science and building individual careers [1,2]. For young scientists, the conference is an excellent forum for establishing contacts with both peers and experts in a given field. It is also a place where the thought is exchanged on an equal footing. The common denominator is, above all, the pursuit of new knowledge [3,4]. In addition to traditional paper sessions, poster sessions can also be an attractive form of presenting theses and research results [5], especially for those starting a scientific career. As a form of communication, the poster may become the first tool the students use during active participation in seminars and conferences [6].

Scientific work, along with its importance and ethos, should be promoted among students from the very start of the educational process. Piquing scientific inquisitiveness of the students at a young age can pay off in their future scientific and professional career. This inquisitiveness should then be reinforced with the gradually expanded range of research tools which not only support the process but also facilitate access to scientific information and the possibility of presenting and confronting one’s thoughts. The first of these tools can be a poster session.

The poster session is an element of the scientific conference, which includes a discussion at the scientific posters posted in the public area. Usually, poster sessions are woven into scientific conference programs in such a way that they do not interfere with other forms of presentation, e.g. paper sessions. The poster session allows the audience to interact with each other and with the author, enabling a direct, usually intimate, discussion of the poster content.

The basic goal of the poster presentation is to demonstrate the results or directions of own research, the issues the author deals with. It is also to interest the conference participants in the presented topic and to establish direct contact with the poster audience, including making new scientific acquaintances.

A virtual student poster session opened the 12th International Scientific Conference of the College of Management and Quality Sciences of the Cracow University of Economics – CMQ 2020, which was part of the celebration of the 95th anniversary of the Cracow University of Economics. Ninety-one posters were selected from over one hundred submitted on the Moodle platform, and made available for all interested parties. Out of all published posters, the Poster Commission chose eighteen. Their authors were invited to a public presentation during a virtual session on the Zoom platform.
The posters were presented in two parts. In the first part, the students presented and discussed:

- The development potential of startups operating in the virtual and augmented reality markets (VR/AR),
- The impact of regional smart specializations on the development of the enterprises operating in the IT/ICT sector, as well as creative and leisure time industries,
- What the mythical unicorn is, and in which sectors are startups most often given the unicorn status,
- The chance for innovative startups to grow during the COVID-19 epidemic and how the biotechnology and financial sectors can take advantage of the pandemic-related market changes,
- How local government units — and especially municipalities — change along with the changes in the immediate and distant environment,
- Whether Polish cities fit into the smart city concept,
- How local government can support the development of business initiatives,
- Whether systemic support for the development of business innovation affect the development of startup initiatives.

In the second part of the meeting, students focused on issues related to effective startup management and the determinants of startup functioning in a turbulent environment. The discussed issues included:

- The secret of UBER’s success,
- The startup support system offered in Israel,
- The elements of the national and regional startup development ecosystem, and Małopolska province’s potential in this respect,
- Whether the cooperation between startups and corporations needed, who leverages it and what is the experience of Polish capital groups in this area,
- The benefits of split payment for innovative enterprises,
- Whether public support of R&D projects can accelerate the development of high-tech enterprises (e.g. the Hyper Poland project),
- What tools should be used to verify the credibility of contractors,
- Whether it is possible to run a stable business in a dynamic environment, and what this stability is.

In the discussion, the students’ comments were often supported by their own practical experience, which further enhanced the value of the presentation.

Nearly 200 participants attended the session: students and CUE researchers, but also businesspeople, representatives of the business environment institutions, researchers from other Krakow’s universities, as well as from foreign research centers. Participants of the session appreciated the high level of posters and answers provided by the students, supported by knowledge of subject literature, international publications and official statistics. The paper is a presentation of posters accepted by the committees.

The submitted paper would not have been possible without the support of a large group of people. We would like to thank the Chairman of the Organizing Committee of the 12th International Scientific Conference of the College of Management and Quality Sciences of the Cracow University of Economics, Prof. Janusz Nesterak, Dean of the College of Management and Quality Sciences, Prof. Bernard Ziębicki, and Prof. Agata Niemczyk for the support in the publishing process.

Erasmus as a tool to promote cities and regions
A. Popiel, J. Natkaniec, J. Ptak, S. Skowron, M. Bogdanowska

INTRODUCTION
Promotion in territorial marketing should be treated as a whole of activities related to communication of a territorial unit with its environment, including information about economic, tourist and cultural values of the city, convincing about its attractiveness and inducing to purchase or consume territorial sub-products. Promotional activities of cities are most often aimed at attracting potential investors, tourists and shaping proper relations between the local government and the local community1. One such promotional activity may be the Erasmus programme, which shapes the image and perception of cities and regions and can contribute to their development. The project aims to prove that Erasmus can be one of the tools to promote cities and regions.

FUNCTIONS OF PROMOTION

- INTEGRATIVE
- STIMULATING
- COMPETITIVE

The first one refers to the local community and aims to strengthen the ties between its members. The second aims to increase the degree of identification with the area under consideration and to create specific, desirable attitudes towards it. The competitive function exists between individual territorial units which compete for aid funds, investors, tourists, etc.

INTERNAL AND EXTERNAL PROMOTION
Depending on the recipient, the promotion can be divided into: internal and external. Internal promotion is carried out in an internal environment. Its aim is to shape the image of the spatial unit and gain acceptance for the initiated actions, and even to encourage cooperation of the local community. External promotion takes place in the external environment. It serves to attract the interest of tourists, capital and to shape a positive image among these groups.

Typology of promotional activities in the commune

- **Product type**: Economic, Social, Cultural
- **Type of recipient**: Internal, External

<table>

when you returned to Poland, did you promote the region where you were on Erasmus in any way? (If so, how?)

- 16%: I didn't promote
- 12%: I've promoted through social media
- 9%: I've promoted through photos and slideshows
- 19%: Other forms of promotion
- 9%: I was telling my friends about my stay

Source: Own research.

94% of the respondents claim that the Erasmus programme gives a chance to develop a given region/city. After returning to Poland, the most frequent forms of promoting the visited region/city were: social media, photos and slideshows, conversations with friends and others. 11% did not promote.

CONCLUSIONS
- A trip to the Erasmus programme is one of the instruments for promoting cities and regions.
- Thanks to the Erasmus programme, cities and regions have a chance to develop by disseminating information about their positive qualities, which affects their image and further promotion.
- The most popular methods of promotion of the visited region/city among Erasmus people are: social media, photos and slideshows and conversations with friends and relatives.

EVENTS AS THE TOOLS IN BUILDING A COMPETITIVE ADVANTAGE

Malgorzata Franczyk, Adrianna Język, Wioletta Kocurek, Aleksandra Kuznetsova, Aleksandra Nowowiejska

INTRODUCTION

Strong competition has forced the city authorities to create clear images of their own centers, based on important and unique characteristics. Competitiveness is often defined as the ability to compete effectively (and thus to be better) within certain structures, over a given period of time. In relation to a country, region or city, competitiveness means the ability to build and maintain an increasingly better quality of life for its inhabitants.

The competitiveness of a city can be considered from different points of view, also from the point of view of its tourist attractiveness. It will then be understood as the ability to effectively compete in the area of tourism with other cities (Hernik, 2014).

Among many elements shaping the competitiveness of tourist regions (including cities) are events.

EVENT MARKETING

Event marketing features the active participation of target groups in the communication process

Event marketing has a unique feature - bidirectionality. It allows, thanks to organized events, to influence selected entities by presenting their own ideas. At the same time, thanks to direct contact, it allows to get to know the attitudes and opinions of the entities it affects.

RESEARCH METHODOLOGY

The research process was divided into two stages:

1. Analysis of chosen New Year’s Eve events in Zakopane and Chorzów

For the purpose of the survey, we have chosen two cities: Zakopane (Małopolskie Voivodeship) and Chorzów (Silesian Voivodeship), where the event was organized by Katowice authorities. Due to the fact that the events organized in these cities are among the most popular in Poland, it can be concluded that they play an important role in building a competitive advantage of these cities and regions.

2. A survey conducted among people participating in the selected events

Test method: online survey among 139 respondents

Test period: 15.04.2020-23.04.2020

Form: 4 single-choice closed questions and one question with a phenomenon evaluation according to the given scale

RESULTS

Question from the survey: On a scale of 1 to 5, which of the following aspects influenced your choice of event?

<table>
<thead>
<tr>
<th>Aspect</th>
<th>The degree of influence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Event program</td>
<td>Definitely influenced (88%)</td>
</tr>
<tr>
<td>Artists</td>
<td>Definitely influenced (61%)</td>
</tr>
<tr>
<td>Tourist attractiveness of the city</td>
<td>Definitely influenced (44%)</td>
</tr>
<tr>
<td>Advertising campaign</td>
<td>Rather influenced (31%)</td>
</tr>
<tr>
<td>Attachment to the media patron</td>
<td>Definitely not influenced (26%)</td>
</tr>
</tbody>
</table>

A positive opinion about the city: Definitely influenced (29%)

Conclusions

- The chart number 1 shows that events help to build positive image of the city.
- The chart number 2 shows that events knock down the loyalty of tourists.
- The most important thing is the program and selection of artists. As you can see from the table number 2, the image of the city influences the choice of the event.

FUNCTION OF LOCAL GOVERNMENT UNIT’S IMAGE IN TOURIST TRAVEL

Klaudia Rosiek, Klaudia Skoczeń, Magdalena Wawoczny, Weronika Zbróg

The primary objective of this study was getting to know the opinions of tourists about the image of Katowice and the reasons why this city is visited. The results of the research can be used by the city authorities in trying to improve the image and introduce changes that will attract more visitors and thus support the economy.

The cognitive-affective theory of tourist satisfaction [Chi, Qu, 2008]

1. The more positive image of the reception area, the greater expectations.
2. The higher expectations, the higher level of verification during stay.
3. The more positive verification of expectations, the more positive emotions and at the same time the rarer negative emotions.
4. The more positive emotions and at the same time the rarer negative emotions, the higher level of satisfaction.
5. The higher level of satisfaction, the stronger effect of loyalty to the region.

The primary objective of this study was to understand the function of local government unit’s image in tourist travel.

Image of the city

There are many definitions of the city’s image, but the most accurate and simple to understand is the definition of W.C. Gartner and J.D. Hunt, who describe it as “the impression an individual has about a place where he does not live.” [Gartner, Hunt, 1987]

Other types of city image include:

- positive image,
- negative image,
- assort image,
- own image. [Kizielewicz, 2013]

City image categories

Universal image - it is used by cities that have created a very strong and lasting image among visitors. It is a method that is based on encouraging tourists to choose a given city. It is based on the stereotypes and history of the place.

Induced image - this image is created with a combination of marketing tools with the desire to build specific associations that determine a given place.

Ephemeral image - shaped unconsciously and strongly rooted in specific events taking place in a specific place.

Preliminary study: on-line survey

Research sample: 165 people

Assessment of individual aspects of Katowice (scale of the evaluation 1-5)

<table>
<thead>
<tr>
<th>Aspects of Katowice</th>
<th>Scale of Evaluation 1-5</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tourist attractions</td>
<td>2,8</td>
</tr>
<tr>
<td>Catering base</td>
<td>3,8</td>
</tr>
<tr>
<td>Public transport</td>
<td>3,4</td>
</tr>
<tr>

<td>3,1</td>
</tr>
</tbody>
</table>

Assessment of individual statements respondents agree with or not

1. Before stay, respondents think Katowice has assorted image.
2. Stay in this tourist place doesn’t have any impact on changing opinion about Katowice’s image.
3. Older tourists are less disposed to change assessment of image.

Hypothesis:

Covariance multiple regression analysis

Test method: online survey

Test period: 12-20.04

Research sample: 165 people

The average respondent

Chart: sources

CONCLUSIONS:

1. The pie chart no. 1 shows that all variants of answers are included – that means Katowice has assorted image.
2. As can be seen from the circle diagram no. 4 only one-third of respondents did not change their mind after the stay – majority changed their mind.
3. The results of the study indicate that older tourist don’t have a tendency to change their assessment.

SUSTAINABLE DEVELOPMENT

Sustainable development is all about finding solutions that guarantee our growth with the inclusion of all social groups in development processes.

Sustainable development of local governments, implemented on the basis of decisions of commune authorities, consists in taking into account many factors, including environmental, social, educational, normative, and economic ones.

In this perspective it will only be possible to solve local problems properly.

LOCAL SUSTAINABLE DEVELOPMENT SURVEY CAWI

The own research survey, based on 111 respondents, was aimed at using examples of sustainable development and assessing them through the prism of the applicability of these methods in Poland.

SUSTAINABLE CITIES

ASSESSMENT CRITERIA

ICONIC EXAMPLES

Zurich (Switzerland) - solar heating, cooling, and energy systems; urban space planning; renovation of old buildings; green city district; and investments in gas and gas cooling.

Malmö (Sweden) - modern architecture, the highest percentage of people commuting by public transport, and the best environmental resources.

Köln (Germany) - modern architecture, water revitalization, closing of traffic roads in the city center, and investments in gas and gas cooling.

Local government units in the context of sustainable development Activities undertaken by local government units in the context of sustainable development in Poland and in the world

M. Ramza, M. Szczepańska, R. Włodarczyk, B. Wojtaś, A. Wróblak

Assess the factors affecting the quality of life of residents

While assessing the level of sustainable development, scientists take into account primarily three components: society, environment, and economy.

The standard living of future generations is threatened by the depletion of the environment and the degradation of the environment's resources. This is due to the lack of awareness of the negative impact of specific laws of development.

Worldwide, the best result in the social and economic spheres was achieved by cities located in the northern part of the country.

The position of the rankings is represented by local and regional authorities, developed cities that are known for their developed agricultural and industrial sectors, and cities at the top of the rankings are the cities that have large investment budgets.

In Poland, the highest percentage of people conducting business activity are in Warsaw, Toruń, and Wroclaw.

In Poland, the highest percentage of people conducting business activity are in Warsaw, Toruń, and Wroclaw.

In Poland, the highest percentage of people conducting business activity are in Warsaw, Toruń, and Wroclaw.

Amsterdam (Netherlands) - modern architecture, the highest percentage of people commuting by public transport, and the best environmental resources.

About Arcadis

Arcadis is a leading global design and consulting company for the natural environment and buildings, with a vision of "sustainable living." Our clients believe in a world where cities thrive and natural environments are protected, and we are proud to be a part of the solution.

Municipalities in dealing with demographic decline

Anna Radchenko
Albina Rybalova
Łukasz Spendel
Magdalena Wójcik

HYPOTHESIS: Both large cities and small municipalities must take appropriate measures to reduce the demographic decline

OBJECTIVE: To show the demographic decline in both large cities and small municipalities by means of secondary data analysis

Europe. In 2019, the world’s population was 7.4 mln inhabitants, and is forecast to continue rising. Aside from Japan, the EU is the world’s most rapidly ageing region in the world. At the period of 2001 to 2016, the number of elderly people in the EU-28 rose overall by 26.6 %, while the overall population of the EU-28 increased by 4.5 %. In 2013 birth rate had fallen to 10.0 live births per 1 000 inhabitants; during the next three years, the EU-28 crude birth rate remained at this level.Among the 10 EU Member States Poland was unique insofar as it was the only Member State that recorded a natural increase in its population, which was exceeded by the negative level of net inward migration.

Municipalities. A decrease in birth rate is a huge threat for cities and municipalities and also leads to deterioration of local budgets, causes problems with infrastructure maintenance and as a result of these actions to impoverishment of large parts of country. This study contains the analysis of demographic data for Łódź (Łódź Voivodeship), Gdańsk (Pomeranian Voivodeship) and urban/rural municipalities: Niepołomice (Lesser Poland Voivodeship) and Opoczno (Łódź Voivodeship).

Population of analyzed units over 10 years

In order to improve the demographic situation, territorial units take appropriate actions, which are presented below. They will allow to keep current residents and attract new ones.

Łódź
1. Take action to protect the city’s security.
2. High availability of housing for young people.
3. Wide access to kindergartens, nurseries, and other forms of pre-school education leading to job retention / parents return to the labor market.

Gdańsk
1. Resident card - Free public transport for students, a package of 10 free entries or services.
2. Program to support the procreation of Gdańsk residents.
3. Long-term city development strategy GDAŃSK 2030 PLUS.

Niepołomice
1. Building a stable economy based on the Niepołomice Investment Zone.
2. Making organized community by supporting young families and organization of community health prevention campaigns.
3. Introducing an integrated and attractive leisure offer: building Niepołomice Centre for Sport and Recreation, launch Niepołomicki News Porta.

Opoczno
1. Activating entrepreneurship in the rural areas.
2. Develops sport and recreation infrastructure by making outdoor gyms and ecological didactic areas.
3. The improvement of the education system, also new facilities like after-school club.

The problem of the demographic decline concerns both municipalities and large cities. Depopulating municipalities and cities should focus primarily on providing adequate living conditions for their own residents, but also aim to attract new ones.

From abroad. When moving to Gőrlitz, in Germany, you can count on a welcome package (including renovated high-standard communal apartments). The city has been offering a new Resident Card for several years; at the signing of a lease agreement for at least 18 months with the municipal housing manager in Gőrlitz and with the electricity provider tenants will be exempt from basic rent charges for three months. The Municipal Transport Management Company exempts new residents of Gőrlitz from bus and tram charges for two months.

Pricing policy in local government unit
N. Piątkowska, A. Mrozicka, A. Gołucka, J. Pagdajewska, K. Grabowski

INTRODUCTION
The aim of this poster is to introduce the topic of pricing policy in local government units.
The definitions of territorial marketing are generally wide, and they include various dimensions. On the one hand, it is associated with satisfying the needs of the local and regional community and, on the other with the impact of public organizations and their activities, influencing them and forming partnerships between entities.

In basic terms, territorial marketing is the entirety of actions taken to appeal to the municipality by civilian (communicating) list of all external and internal investors. It is also a development program for local economies and for promoting a good image of a territorial unit, undoubtedly, there is a need to create the best conditions for investors such as building a price-based infrastructure and promoting investment areas.
The advantages of territorial marketing is that it actually includes all the benefits that consumers can obtain at the level of market transactions. The second aspect is that all of the company’s investments in market activities are transferred with footnotes.

PRICES IN TERRITORIAL UNITS

The prices in a territorial unit perform the following functions:
- INCOME-RELATED - it is partly related to the commercial activity of the territorial unit, being a source of income for it.
- STIMULATING - refers to the prices of services provided on a commercial basis and especially in the case of products guaranteeing privilege, e.g. a tax for the opportunity to use the elements of a given town to promote a company.
- INFLUENCING - the price primarily influences the buyer about the quality of the product / service and its price.
- ALLOCATION - the price allows for an assessment of goods consumed and achieving a financial surplus.
- INCENTIVE - the price encourages customers to buy products or use services.
- REVENUE FUNDING - in the field of goods and services important from the point of view of external benefits and preventing waste and rationalizing the use of goods and services public as needed.

The price is one of the four marketing elements of the revenue-generating mix. In local government, the price of the service does not always depend on the price of its production. It can be higher or lower and sometimes is provided for free.

Municipalities have quite broad qualifications. They can shape the size of the influence of their own revenue. In determining the level of their own prices, they do not form any laws. Shares in public taxes are an exception from the rule. Territorial autonomous public entities are the price set on their state, nor may they reduce or exempt them ever.

RECIPIENTS

The main recipients of local government units are distinguished on the basis of segmentation of buyers of territorial units and are divided into:
1. local residents,
2. urban and rural residents and students, seasonal workers,
3. municipal authorities,
4. property owners and land users,
5. local entrepreneurs,
6. local associations and institutions,
7. representatives of local society.

RESEARCH

From 1st to 30th April an anonymous survey was conducted to determine what residents think about the price level in the municipality of Gliwice. 101 people from the municipality of Gliwice took part in the survey. Among respondents, there were: 15% of women and 6% of men. 54.4% of people from 18 to 25 years old. 21.6% of people aged 36-39, under 11% aged 37-45, about 10% from 46 to 55 years old and about 1% are 55 years old.
18.0% were with a secondary degree, 39% with vocational education, 3% with further education, 34% with good financial education, 38% average, less than 35% with very good and about 6% with bad material situation.

Municipal Programs

KCM
- Tax relief
- Co-financing apartments

The Amount of Municipal Programs

Public Transport Prices

Less than 50% 50% 59%

Auto fare

Less than 50% 50% 59%

Entertainment Budget

Municipal Programs that locals enjoy the most are KCM (City Card), which is used by more than 70% of respondents, over 30% of respondents are highly satisfied. More than 100% of respondents showed that they are too low, while only 2% think that there are too many of them.

Pricing Policy

The price in the structure of the local government unit has a different impact on individual segments. It varies for the investor, resident or tourist.

Price for Individual Segments

Price for individual segments is market-based and depends on several factors, including local government policy.

CONCLUSION

Price is one of the four elements of the marketing mix in territorial units.

- It performs the following functions: income, stimulation, information, allocation and representation.
- The price defines the conditions of the offer, including the offer and the offer in the market.
- It is different in different segments in the product, so it will be very important for residents and tourists.
AIM
The main aim of this project is to show the smart city idea and use of technology in their management. Two selected Polish cities – Krakow and Warsaw will be analyzed in terms of implementing the concept of smart city and their image among the residents.

INTRODUCTION
Smart City is a creative city strongly focused on development and innovation. It is a response to changing needs in various areas such as security, infrastructure, management, ecology and transport. A characteristic element of an intelligent city is the big role of advanced technologies. They enable the sustainable development of cities, reducing at the same time consumption of natural resources and improving in this way the quality of life of residents. A smart city is an ultra-modern urban area that addresses the needs of businesses, institutions, and especially citizens [Sikora-Fernandez, 2013, p. 84-85]. In order for cities to be considered intelligent, they must contain elements such as: smart economy, smart mobility, smart environment, smart people, smart living and smart governance [Gottib, Olzsiwski, 2016, p. 23-25].

ABSTRACT
There is no doubt that the world is constantly moving towards increasing urbanization. Currently, cities that develop standard of living using modern technology in management process are referred to as smart. It has become a goal for more and more cities in the world, including Krakow and Warsaw. For the purpose of work, these two have been compared with other European cities striving to become smart. Studies have shown that both of them achieve higher than average assessments of the use of technology in the development of the city’s infrastructure, but Warsaw is ahead of Krakow in every field. It is a proof, that it has many areas in which it can still develop. However, to be able to achieve more, prudent management must go hand in hand with creative use of the opportunities offered by modern technologies.

CASE STUDY
Warsaw become a significant center for the development of entrepreneurship, innovation and startups. Its initiatives – the Million Trees app, the Step by Step progress or the modernization of the heating network affects the sustainable development of the city. Through the participatory budget and access to open data sets, Warsaw authorities stimulate creativity and engage residents in the technological progress of the city.

Many innovative solutions are introduced in Krakow to improve the lives of residents. In the city are used systems as TTS5 – Tram Traffic Control System, UTC5 – Urban Traffic Control System and Intelligent Lighting Control System. In use is also City Spatial Information System – website consisting of maps/applications available for citizens who can participate in surveys and submit comments regarding the development of the city’s green areas.

The IMD Smart City Index from 2019 is a rating of the city’s perception of issues related to technological applications available to them. The study was conducted by recording the opinions of 120 city residents. In Smart City Ranking inclusive 102 cities, are found two Polish examples – Warsaw on 61st position and Krakow on 69th.

CONCLUSIONS
After analyzing the research carried out in Krakow and Warsaw regarding the implementation of smart city idea, it can be concluded that these two cities have similar problems, but use different solutions. There are imperfections arising in the process of implementing new technologies, but it is certain, that these cities are on the right track. It is especially shown by last year’s Smart City ranking – Krakow and Warsaw took place in the third group of the smartest cities and achieved better scores than average in the group. To improve the position in the ranking, city authorities should allocate more funds to the implementation of modern technologies and use their potential. Residents should be encouraged to participate more in the city life, because it will depend on them only, to what extent their needs will be met and the standard of living will improve. We should observe further steps of implementing smart strategy in Krakow and Warsaw, because time will show to what extent their solutions can be called smart management.

ABSTRACT

One of the most important aspects of a well-prospering territorial self-government unit is its positive image. It is a keyfactor for many decisions and local development. The desired image can be shaped by various marketing tools and the local community is a significant segment of the unit. The aim of presented study is the identification of the differences among citizens of small and large communes. The research presents three approaches to the inhabited unit and perception of its image in reference to the neighborhood, infrastructures, local authorities, investment area and many others. The results allowed among others to prove the hypothesis that smaller communities are more likely to identify themselves with inhabited region than large communities.

INTRODUCTION

The creation of territorial self-government units in Poland after 1989 was the reason why its positive image among citizens became truly necessary. The unit’s image can be described as a summarized combination of subjective impressions held by the people who have about a territorial unit [Dowd-Suchy-Otropiček 2010, s. 85]. To help managing such units is a profitable way, the concept of territorial marketing was invented [Sukal, 2005, s. 216-218]. The most important group of its recipients are the inhabitants whose opinion and actions have key-meaning for the local growth and maintaining competitive position among the units [Branka, 2011, s. 53].

The main aim of this study is the identification and analysis of differences between citizens of small and large communes (Dobczyce and Cracow) in relation to their territorial units’ image.

RESEARCH METHODOLOGY

The research was conducted by the method of a diagnostic survey – in the form of questionnaires. It was carried out in April 2020. The aim of the research was to find out, if the following hypotheses are correct:

- Small communities are more likely to identify themselves with their region than residents of the city.
- Small communities are more collective.
- Large communities are less involved in supporting the image of their commune.

The research was performed among inhabitants of the city of Dobczyce and Cracow.

RESULT & CONCLUSIONS

The research has provided an overview of inhabitants’ perceptions of their territorial units. It is clear that local authorities, the image of the territorial self-government unit, the role of economic development, the perception of the architecture of the unit and the role of local authorities are of great importance. The results have allowed to disprove the hypothesis that inhabitants of large communes are more inclined to support their territorial unit.

Among the inhabitants, the satisfaction with investments has to be pointed out. Both crucial groups of majority have indicated the answer “rather trust”. However, a significant amount of respondents (68%) confirmed that the perception of the architecture of the commune is a good place for living. In both cases, respondents from Dobczyce declared that architectural monument is the most popular answer in Dobczyce than in Cracow. The respondents from the city of Cracow find the architecture as the main advantage of the commune. The respondents from the city of Dobczyce find the architecture as the main advantage of the commune. The respondents from the city of Dobczyce find the architecture as the main advantage of the commune.

The results of surveys and questionnaires have showed some important differences among the inhabitants of Dobczyce and Cracow. The results were divided into five main segments: the identification of territorial unit, perception of the architecture of the unit, the role of local authorities, the role of economic development, the perception of the architecture of the unit.

In case of Cracow, the majority of the respondents (60%), do not have an opinion on trusting local authorities. On the contrary, the majority (66%) of the inhabitants of Dobczyce declare trusting their local authorities.

In Dobczyce, 31.9% respondents said that they were sure of help their neighbors and more often try to help each other in difficult situations. In case of Cracow, the majority of the respondents (40%), do not have an opinion on trusting local authorities. On the contrary, the majority (66%) of the inhabitants of Dobczyce declare trusting their local authorities.

In case of Cracow, the majority of the respondents (60%), do not have an opinion on trusting local authorities. On the contrary, the majority (66%) of the inhabitants of Dobczyce declare trusting their local authorities.

According to the statistic almost 46% of respondents from Dobczyce choose answer “natural environment between citizens”, and second place got exactly the same answer which was marked by 43,9% of respondents. Where as least popular answer in Dobczyce was “local history and art” at 35,9% and in Cracow “lead culture and history” at 46,8%.

“Do you think that creating civic budget projects is needed?”

The structure of answers in both communes to both questions is very similar. 46.8% of the inhabitants of Dobczyce and 52.6% of the inhabitants of Cracow confirmed that they have not participated in voting for civic budget projects, which constitutes more than half of the respondents. Therefore, the answers to the second question: about the need to create these projects, sums up 30.4% of the inhabitants of Dobczyce and 30.0% of the inhabitants of Cracow say that the budget projects are needed. We cannot notice here a certain inconsistency of such beliefs: do not participate in voting for civic budget projects.

“Do you think that you can count on your neighbors in a difficult situation?”

In contrary, Dobczyce has more certain of their help from the neighbors and more often try to help each other in difficult situations.

What is the key to Uber's extremely fast growth?

Company history

Uber is an American company based in San Francisco, the creator of the Uber mobile app which is used to order a car transport. Uber provides services in over 900 cities around the world to over 110 million customers.

The idea for Uber was born when its founder Travis Kalanick couldn’t find a taxi in Paris to get to the conference. After two previous unsuccessful ventures, it was extremely difficult for Kalanick to convince investors. However, as soon as Ubercab was launched in San Francisco, it became a big hit. After the first success, it was decided to expand to other cities in the US and abroad and the first city was Paris. Uber is currently valued at USD 52 billion.

Business model

Uber has its own smartphone application where the customer can choose the starting point and destination of their journey. At the end of the route, they are obliged to pay with debit or credit card connected to his account in accordance with the approved estimated amount, being the result of the temporary supply of drivers and passenger demand. Drivers working in the Uber system are not direct employees, but only contractors. They can use their own or rented car. However, before they are allowed to cooperate, they must undergo health tests, as well as have a driving license, appropriate age and a mobile device. For the safety of passengers, from time to time drivers are checked when logging in by having to take a selfie to confirm their identity.

Competitive advantages

The company’s success, which led to the position of a global leader in car ride-sharing services, was associated with using the use of a very innovative approach. It was based on filling the market niche between taxi services and using personal cars. This allowed Uber to connect passengers directly with drivers performing services through the company’s mobile application.

In addition, Uber is able to monitor the level of customer satisfaction through the driver rating system, which leads to keeping the staff at the highest level. It allows providing much greater security for users of Uber services, compared to taxis.

Summary and conclusions:

What is behind the rapid development of Uber, allowing for a smooth transition to the level of global corporation? First of all, it is to notice a market niche, where there is no competition yet, or which has not been successfully controlled by another startup. This situation can be called the discovery of the blue ocean. In the next phase, Uber managed to efficiently obtain financing, which allowed the create applications and company structures, as well as conducting a wide promotional campaign of services, allowing for broad expansion.
The main idea: The stages of development of a startup are associated with plant life: the seed is planted and watered, it grows in a stem with leaves, develops and a flower appears on the top. A flower is a symbol of plant maturity, and in the field of entrepreneurship, maturity means that a startup has grown into a stable business. In this article I will tell you how to make sure that your startup does not dry out and wither, but blooms with bright colors.

**CONCLUSIONS:**

Every startup is different, every looks like another one, but it is still individual. A startup can turn out to be a spikelet of wheat, or maybe a huge oak. It all depends on you. The main thing is to grow it strong and sustainable.

BRIGHT AND DARK SIDES OF BUSINESS

What are the differences between a huge market leader and a small innovative company?

Start-up advantages:
- low costs of running a business
- at the beginning people do not need to have such a lot of capital as in common company
- high investment refund after achieving success at the market
- great opportunity for young person to experiment
- how to trade at the business world
- knowledge and experience growth

Corporation advantages:
- the shareholders are not personally liable for any debt associated with the corporation
- ease of funding – corporations can transfer ownership by buying or selling its shares
- no limit to the life of a corporation, since ownership of it can pass through many generations of investors
- brand recognition with an existing, loyal customer base
- invest in individuals through education, skill development, and career assistance programs to help align an individual's personal career goals

Start-up disadvantages:
- High risk of failure
- Low compensation
- Poor market access
- Team conflicts
- Lack of resources
- Stress out
- Longer hours of working
- Learning to be frugal
- Ability to run multiple tasks

Corporation disadvantages:
- employee anonymity
- high hierarchy (information goes through many levels of management)
- stress related to employee requirements - rat race
- an employee often spends many years on one position
- extremely high costs of running a business

Both big corporations and start-ups are needed on the market. People treat corporations as big tanks that never stops but moves slowly. Where as start-ups are seen as speed boats that explores new industries, creates new trends. They offer different things and solution to the people but they both keep the society moving and learning new things.

Financing by Business Angels began in American companies in California's Silicon Valley. In Poland, business angels started investing since 1990, during the transformation process. Then the development of entrepreneurship progressed and many small and medium-sized operational units started to operate. Business Angels are not new forms of business financing, but in recent years have become the subject of research and interest.

Business Angels

Advantages

- Business Angels usually take the risk associated with your idea
- An investment from Business Angels is not debt.
- Business Angels give advice on how to report success
- You will get contact to their network and community
- Business Angel can invest at any stage of the business evolution cycle.
- You have the chance to regain your attendees

Disadvantages

- A high tolerance for risk has its price
- You reduce your future profits with Business Angel
- You lose some control over your business
- Business Angels leave your company after a while
- Don’t expect to receive follow-up investments
- Some Business Angels invest in companies that are outside of their industry and knowledge

BUSINESS ANGEL
an individual who provides capital for a business start-up, usually in exchange for convertible debt or ownership equity.

people aged 40-60, most often men
private investors with a good understanding of industrial activities
financially independent, accessible by private assets and high income
persons who have achieved success
they have the capital to start, information, contacts and experience
get involved in the availability offer to get profits

From startup to corporation. Business Angels as a source of financing

From startup to corporation

How can a startup become a corporation?
The answer was based on desk research

Startup

Startup is a temporary organization or a young innovative enterprise which are looking for a business model that would allow its profitable growth. Startups face high uncertainty and have high rates of failure. A minority of them can become successful and influential. Some startups become leaders in their industry and achieve huge profits.

Corporation

A corporation is a kind of organization - a group of people or a company, which is authorized by the state to act as a single entity. It is treated as that by a law for certain purposes. Corporations are usually called huge and often global companies with a large number of employees. Corporate actions often influence market behavior and their products are usually well known to customers. Due to very high revenues and sales, corporations can control the market in which they operate.

Dropbox, Inc.

Dropbox, a cloud storage service, began operating in 2007 as a two-person startup. After a dozen or so years, it has become a large enterprise with over 2,000 employees and is listed on the NASDAQ New York Stock Exchange. The data storage giant now provides services to over 500 million people and generates a billion dollars in annual revenues.

Everything should be made as simple as possible, but not simpler
- Albert Einstein

7 recommendations in establishing and scaling up a company based on Dropbox, INC:

- Create things difficult to copy: Unlike competitors, Dropbox papers places more emphasis on deepening cooperation between users (e.g. cooperation in the exchange of materials) than on the possibility of only formatting documents and files
- Make the company evolve with the world: The company’s main mission has evolved from storing files in the cloud to helping companies work creatively and increase efficiency
- Reading is the best way to learn: at first, start reading about the basics of running your business, instead of arranging hundreds of business meetings
- Find mentors who one step ahead of you: the most helpful mentors for Dropbox are startups from 6 months to 2 years ahead
- Balance external and internal expertise: as startup scaling develops, early employees may not be as helpful as more experienced ones who have worked in similar conditions in the past
- Keep calm, self-awareness and mindfulness: keep in mind that “the treadmill will be going faster than you can run”
- Don’t wait for the optimal moment: “The best training for a founder or CEO is to be a founder or CEO”

From startup to corporation on the example of the Dropbox, Inc.

1. Skyscanner finds the best flight information and displays the cheapest deals under 30 seconds. The company has a website and a mobile application that allows to use it easily anywhere in the world. Skyscanner Price Alert feature is a great way to track prices on a particular flight. You can save money by monitoring a flight you're interested in and buying it when the prices have dropped. With the Cheapest Month feature, you can instantly view and select the cheapest month to book your flight. It also allows you to search flights to "everywhere", that way you can pick a destination based on the lowest price. And most of all Skyscanner is completely free to use.

2. Skyscanner is used by people who like to plan their travels from the begging. This site is addressed to brave often spontaneous customers who no longer wants to rely on travel agencies and plan everything by themselves. Every customer is different, however they have one thing in common – love for travel.

3. The reason why Skyscanner has become the most recognizable company in travel sector is that the founders found the niche on the market and additionally met the expectations of clients.

4. Having objectives is an important factor for successful companies. In this case, Skyscanner always does its best to follow goals and rules formed in the beginning. Thanks to that, the company is still regarded as the most recognizable flight search engine.

5. The mission of the Skyscanner had a big impact on its success, it clearly sets goals and motivates staff to their best.

6. In starting a business Skyscanner focused on values such as thought for customers, precision of flight researches and clearness of the website.

Conclusion: The example of Skyscanner shows that small start-up might become a well-known organization with many employees. Being the most recognizable flight search engine is not pure luck, it’s a success achieved by hard-work, love for travelling and well-set objectives. For Skyscanner, every customer matters and their expectations are duties that must be fulfilled. Skyscanner also proves that even companies with little resources can become one of the leaders in the sector. It’s an excellent example how an innovative idea can lead to a big success.
Obstacles which young businesses can face in new technology branch fighting with unfair competitors.

Are young businesses able to succeed in the face of unfair competition?

Unfair competition is defined as taking actions that are contrary to the law as well as to accepted customs. It also involves acts that threaten or infringe the interests of other entrepreneurs or consumers. The problem of unfair competition is encountered in every industry, regardless of the size of the company or the time of its operation.

Activities carried out by unfair competition include disseminating false information which may be misleading, making it difficult for other entrepreneurs to enter and operate on the market, using other companies' data, imitating a finished product, copying a product, using the know-how of a given company, not patented products.

What is unfair competition?

1. The IT industry is changing very dynamically, thus IT specialists need to react very quickly to the clients needs and adapt to market transformation.
2. There is a huge risk that a company can be a victim of cybercrime (for example the hackers attack or malicious virus that can steal the important data).
3. The presence of foreign companies on the market that are more competitive, faster, cheaper and able to offer a better, more personalized product.
4. The company ideas looks very well on the paper, but at the end they fail to meet customer needs (they do not have a purpose).

Conclusion.

Unfair competition was, is and will exist on the market. We can see actions which are far from being ethical, like stealing data, unpatented ideas and know-how. These actions can be harmful to the entire industry, which can lead to the bankruptcy of many companies.

The main reason to be successful in the IT sector is to find customers who are willing to buy the service or product. Many successful entrepreneurs emphasize that hard work and luck are also very important.

How many companies have succeeded?

- 90% Failed
- 10% Succeeded

Why have they succeeded?

1. The product is perfect for the market.
2. The entrepreneur does not ignore anything.
3. The company grows fast.
4. The team knows how to recover.

From startup to corporation - what is unfair competition
M. Bruderek, A. Świrk, D. Tokarczyk
FROM STARTUP TO CORPORATION

**Startup** is an organization created in order to search for repetitive and a scalable business model.

**Business model** is a business scheme that allows determine its main features.

**Corporation** is an organization with legal personality, of which **members** are an important element. According to the definition of corporation, membership in this social organization must have permanent and be regulated by internal law.

**DEVELOPMENT PROCESS**

1. **Idea** - assumes the main outline of the enterprise, and startup is the first step to implement the idea. The advantages are low costs and the opportunity to gain experience.
2. **Incubation** - a service offered by business incubators that are focused on supporting companies of various legal forms, including in acquiring clients or accounting and legal formalities.
3. **Acceleration** - aims to develop the idea, test it and prepare for implementation.
4. **Scaling** - a key aspect already at the stage of a business plan that allows you to increase the scale of the enterprise's operations.
5. **Corporation** - achieving corporate status, which is characterized by: large employment and sales volumes, well-organized structures, modern products, advanced technology as well as large capital and income.

**SELVITA**

Selvita S.A. is one of the largest companies in Europe that provide **research and development services** (Contract Research Organization). The main areas of activity are: **drug discovery, regulatory research, and research and development**.

Selvita was founded in 2007 and currently employs 500 people, of whom 30% have a PhD degree. The company’s headquarters and laboratories are located in Krakow, the second research department in Poznan. In addition, Selvita has offices in the largest biotechnology centers in the world: in Boston, near San Francisco in the United States and in Cambridge in the United Kingdom.

Selvita uses its modern laboratory infrastructure, extensive scientific experience and a contemporary approach to managing research projects to build long-term business relationships with clients.

**SELVITA FROM IDEA TO CORPORATION**

1. The idea of founding Selvita S.A. in 2007 appeared after the analysis of the global market of innovative sectors of the economy by Paweł Przewoźnik and Bogusław Sieczkowski. For many decades, pharmaceutical companies have themselves conducted research on new drugs. At some point, however, it turned out that, as in the technology sector, large companies are inefficient innovators. This is how the biotechnology industry was born. The process of inventing new drugs that save human health and life is based mainly on it.
2. In the case of Selvita S.A. Incubation was based on investments by pharmaceutical companies in projects of promising biotechnology companies, which at the beginning of their activity do not have revenues from the sale of medicines.
3. The development of Selvita S.A., i.e. business acceleration, began in 2007, when the company began to acquire grants and debuted on NewConnect (an alternative WSE market intended for emerging companies).
4. Adopted by Selvita S.A. the strategy of conducting innovative activity limited the need for investors' capital moved to the main WSE market and is also developing dynamically in the services segment. Scaling system at Selvita S.A. it was very visible because the revenues from the service segment announced by the companies were much lower than the real ones.
5. Currently Selvita S.A. is one of the largest companies in Europe operating in the field of oncological drug discovery. It has two laboratory branches - in Krakow and Poznań - and sales offices in the United Kingdom (Cambridge) and the USA (Boston and San Francisco). Its valuation since the transition to the main market of the WSE increased six times to over PLN 800 million. The company employs over 420 people, of which 1/3 holds a doctoral degree. Selvita S.A. is an exemplary example of the development of a business idea from a startup to a corporation.

From startup to corporation – case study of Selvita

M. Zakrzewska
From idea to Unicorn

B. Bojarska M. Drobot K. Kozioł

How to become a unicorn company? How to raise funds? How can you embody your idea in a best way?

Stages of the startup funding:

- **The pre-seed stage**
  It's not about investment, rather about bootstrapping. This stage founders deal with idea validation. Valuation ranges from $10 000 to $100 000.

- **Seed stage**
  Now valuation ranges from $3 000 000 to $6 000 000. Investors are needful to buildup scalable business processes and notice a product or market fit.

- **Series A**
  The first stage of capital investments. Now your startup should have a predictable business model with a stable customer base. It’s not about innovative ideas. Valuation is now about $10 000 000 to $30 000 000.

- **Series B**
  Next of venture capital investments. Market valuation now is about $30 000 000 to $60 000 000. Continues the ideology of stage A.

- **Series C**
  A rapid market acquisition. Investments aim to speed up the market expansion for your product more than previously.

- **Initial Public Offering (IPO)**
  Entering the market by selling corporate shares for the first time. The majority of the unicorns startups have already IPO’d or at least considered this step.

Tips that can help you:

- **Product evolution** - if it’s necessary, try to change strategic direction, when market condition change.
- **Know your weaknesses** - when you understand your imperfections, you know how to deal with them.
- **Be customer-centered** - start with focusing on the particular customer portrait before reaching a “one-size-fits-all” stage.

Conclusion:

- If you raise a unicorn startup you contribute to creation of a new startup-oriented economy.
- The person who comes up with an idea should be enterprising, smart, persistent in achieving goals and hard-working.
- Rapid growth is the key to your first billion.
- Currently there are a lot of ideas but if you want these to become successful you need to work hard.
#Lack of market demand
One of the most important reasons for startup failure is the lack of demand for your product. The shortage of appropriate actions and the belief that your product is the best can be fatal. Your customers are in need of solutions that are not available on the market.

#Insufficient funds
The problem occurs when your account does not have enough money available to cover your payment.

#Disharmony in the team
A diverse team consisting of various people, different views and opposing skills is the basis of every company.

#Worry about competition
In practice, every company has to face the competition. It is common for startups. However, they should not pay too much attention to the rivals. Find the appropriate balance.

#Expensive pricing
Prices should be closely correlated with product quality, especially in startup companies. If a product is priced too expensive it will be difficult to find a client for it and it might fail to bring in customers to make it successful.

#Poor marketing
For a successful startup, it is crucial to target the right audience. You should be focusing on getting the attention from the customers and convincing them into buying your product

#Ignoring customer’s needs

#Lack of passion

#Legal challenges
VR AS A MEDIUM OF INTERACTIVE STORIES

Mission:
Creating feature-length cinematic interactive stories in a VR environment based on emotional, breathtaking plots and unconventional mechanics. The goal of this enterprise is also to change the current perception of stories using the latest technologies and modern methods of creating narration.

Introduction:
Games created on VR already attract lovers of games themselves on account of a large library adjusted to this technology games, but also people who have not had so much to do with them in everyday life, and even their opposites. This is due to a completely different way of perceiving this entertainment. It is hard to describe the experience with words, while the ability to enter the virtual world in this headset allows 360 degree rotation in all axes in 3-dimensions space or possibility to touch things around, it causes much deeper immersion.

Video games market:
“Five game developers on the list of one hundred richest Poles”. This means that game production is one of the most profitable industry in Poland, good to open a start-up within this field here.
“The entire video gaming market is expected to be worth over 180 billion U.S. dollars by 2021”

Virtual Reality (VR) is the use of computer technology to create a simulated environment. Unlike traditional user interfaces, VR places the user inside an experience. Instead of viewing a screen in front of them, users are immersed and able to interact with 3D worlds.

“The augmented and virtual reality (AR/VR) market amounted to a forecast of 18.8 billion U.S. dollars in 2020 and is expected to expand drastically in the coming years.”

“Worldwide, VR market volume is expected to reach 98.4 million sales by 2023, generating an installed base of 168 million units with a worldwide population penetration of 2%. Growth is forecast across all regions and countries, with China leading the way.”

Forecasts for 2025 show that the VR industry will reach about 36 billions of USD. Video games and video entertainment market will cover about 45% of the entire VR industry, which is almost half of all areas in this field.

Our own analysis:

1. Accessibility:
Many people already have VR headsets in their homes (currently compatible with PCs or PlayStation). However, many of them do not have the opportunity or money for such equipment. Therefore, in every major city in the world there are many VR studios that allow the use of such technology in their premises. The price of headsets will decrease over time yet. Money and availability are therefore no longer a problem.

2. Mechanics:
There is a huge number of experienced employees in the gaming and film industry in Poland. This can be seen in world-class games or film productions created in here. In addition, more and more fields of study related to game or film development are opening. Therefore, by having a studio in Poland we can easily find professionals willing to work stationary, and direct and frequent contact is very important during creating such comprehensive and artistic production.

3. Interactivity:
Participants will make many different choices throughout the game that will have a significant impact on the story. Recently, games of this type (ergodic works) have become very popular. We’re going to focus on storytelling, so the interaction will be slightly less than in classic video games. However, thanks to them, the participant can decide the fate of the adventure. They will also influence the possibility of adapting entertainment to the participant’s preferences based on the choices they made.

4. Professionals and stationary work:
Due to the great opportunity to interact with the virtual world, VR has great potential in terms of mechanics. The ability to shoot someone directly by pulling the trigger, various ways of moving, flying or even casting spells like in Harry Potter, make you feel even more in the virtuality forgetting about the real world. The potential is also noticeable in 3D interfaces.

5. Emotions:
Emotions play an important role here. This medium is characterized by a wide field of view in 3D, covering the real world thanks to helmets, but also an intense sense of music in three dimensions. You can feel how an arrow flies past us. Hear the sound in front of you, then at the ear and eventually how disappears behind. The deeper immersion in history, the more intense experience the emotions, which affect more fun from the story. Feeling of freedom, when you flying between buildings like Spiderman, the impression when someone looks you straight in the eye, a sense of sadness when somebody is dying in front of you, feelings of happiness and madness at a virtual concert, romantic scenarios observed from the perspective of an eyewitness or even a participant.

From corporation to... start-up? The employees perspective.
The vast majority of people working in the gaming or VR industry are strong enthusiasts. They do it because they love it and devote a significant majority of their lives to it. Therefore, people feel attached to this environment and show great sympathy for other people working in these industries. For this reason, employees are much more interested in working on ambitious productions and people with whom they get along well. Salary is of course very important, but goes to the background in this case. Therefore, professionals are eager to join new start-ups, because they have both close relationships with coworkers and great decision-making possibilities.

Summary:
A corporate (corporation, actually) is a well-established company with a set business model. It has survived the competition and it up running. Corporations have money and manpower, whereas start-ups have to look for a source of funding and struggle in instability. In our opinion, it is a natural order of things to turn a start-up into a corporation. We find our business will follow this path.

Olśnia Solarska, Magdalena Ślusarczyk, Dominik Zieliński

VR as a medium of interactive stories
O. Stolarska, M. Ślusarczyk, D. Zieliński
ABSTRACT

Undoubtedly, Facebook is one of the most successful startups of all-time. By analyzing the history, we intended to explore its path of becoming the social network empire, and if the strategy of numerous mergers and acquisitions had a significant impact on it. Moreover, using the example of Facebook, we would like to encourage the audience to express their own opinion and discuss the moment when start-up become a company. As there are multiple versions of startup definition, it is hard to decide whether a company is still a startup. We chose definitions, confronted them with Facebook actions and placed possible moments of becoming a Corporation on Facebook timeline below.

RESULTS

From the very beginning, Facebook strategy was based on acquisitions and mergers. As the diagrams show Facebook policy resulted in the rapid growth of the company. Why? Because of acqui-hiring. Mark Zuckerberg is achieving various goals by acquiring the best specialists who effectively fulfill his ideas. The great example is Parakey company which was bought in 2007 to design Facebook mobile application. Now Facebook not only acquires companies for people but also for technology. It is an ingenious strategy to remove the danger of competitors. Instagram was becoming one of them so in 2012 Facebook decided to buy it. Nowadays that strategy still works. Even though Facebook has been on the market for 16 years it is still considered as a pioneer of progression among the digital world.

CONCLUSION

Although Facebook still has features of a typical startup - like innovation and scalability, we cannot consider it as one of them. It is caused by the number of employees and merges, enormous incomes, unmeasurable resources, and possibilities. Even after analyzing timeline of Facebook, we cannot decide the moment of becoming full-grown company because of the immediate success.

Facebook master of startups
Z. Czudaj, M. Kaleta
Entrepreneur and e-commerce pioneer Jeff Bezos is the founder and CEO of the e-commerce company Amazon, owner of The Washington Post and founder of the space exploration company Blue Origin. His successful business ventures have made him one of the richest people in the world.

Born in 1964 in New Mexico, Bezos had an early love of computers and studied computer science and electrical engineering at Princeton University. After graduation, he worked on Wall Street, and in 1990 he became the youngest senior vice president of the investment firm D.E. Shaw. Four years later, Bezos quit his lucrative job to open Amazon.com.

THE BEGINNING OF AMAZON

• AN IDEA

In 2010 Jeff Bezos said “I came across the fact that Web usage was growing at 2,300 percent per year. I’d never been or heard of anything that grew that fast, and the idea of building an online bookstore with millions of titles — something that simply couldn’t exist in the physical world — was very exciting to me. After much consideration, I took path to follow my passion and I am proud of that choice!”.

• START-UP CAPITAL

The initial startup capital came from his parent’s personal savings: “The first initial start-up capital for Amazon.com came primarily from my parents, and they invested a large fraction of their life savings in what became Amazon.com. And you know, that was a very bold and trusting thing for them to do because they didn’t know. My dad’s first question was, “What’s the Internet?” Okay, so he wasn’t making a bet on this company or this concept. He was making a bet on his son, as was my mother. So, I told them that I thought there was a 70 percent chance that they would lose their whole investment, which was a few hundred thousand dollars, and they said anyway.”

• THE GARAGE WHERE AMAZON STARTED

Getting Amazon started, Jeff and his wife rented out a three bedroom home in Seattle, Washington. The home had a reasonably sized garage which was perfect for Jeff and his wife to launch their new business ‘Cadabra’. The name Cadabra was short lived when it was continuously getting mispronounced ‘Cadaver’, so Jeff actually decided to change the name to Amazon.

• THE INITIAL YEARS OF AMAZON

For the first year, Jeff did start along with his initial team of five employees working on learning how to source books and setting up a computer system that would make Amazon.com easy to shop online. And finally, the website was created on July 16, 1995, with the tagline “Earth’s Biggest Bookstore.” Within the next three years, Amazon.com grew on to become a company with 100 employees that drew sales of more than $15.7 million, to an awesome company of more than 3,000 employees with $610 million in sales.

• THE TURNING POINT IN THE HISTORY OF AMAZON

Their sales gradually increased at the rate of 3000% annually and had become country’s third-largest bookstore that times. Soon after that, Amazon started expanding itself into music, gifts, and pharmacy markets as well and they did even join Sotheby’s Holdings Inc. in June 1999 to launch the online auction site sothebys.amazon.com, as well like eBay. Amazon also added clothing sales to the product line in October 2002, after partnering up with hundreds of retailers including Land’s End, Nordstrom, and The Gap. They also organized a subsidiary entitled Amazon Services which allowed customers to order goods from co-branded sites such as Borders and Toys ‘R Us.

Soon Mr Beza’s empire grew to include electronics, toys and kitchen utensils. The growing network of US warehouses helped extend what the company could offer, dramatically increasing its popularity with customers. Ten years later, Amazon had become the biggest online retailer in the US and around the world.

Over the years, Amazon has acquired almost 100 smaller firms, but the best valued acquisitions are Whole Foods, Zappos, Ring, Twitch Interactive and Kiva Systems. Till date, these were the best firms that were Amazon’d.

• PRODUCTS AND SERVICES

Amazon.com’s product lines available at its website include several media (books, DVDs, music CDs, videotapes and software), apparel, baby products, consumer electronics, beauty products, gourmet food, groceries, health and personal-care items, industrial & scientific supplies, kitchen items, jewelry, watches, lawn and garden items, musical instruments, sporting goods, tools, automotive items, and toys & games. In August 2019, Amazon applied to have a liquor store in San Francisco. Amazon has separate retail websites for some countries and also offers international shipping of some of its products to certain other countries.

Amazon.com has a number of products and services available, including:

- AmazonFresh
- Amazon Prime
- Amazon Web Services
- Alexa
- Appstore
- Amazon Drive
- Echo
- Fire tablets
- Fire TV
- Kindle
- Kindle Store
- Music
- Music Unlimited
- Amazon Digital Game Store
- Amazon Studios

Amazon is an American multinational technology company based in Seattle, with 750,000 employees. The company generates over $280 Billion in revenue and holds the title as the world’s largest online retailer. Amazon distributes downloads and streaming of video, music, and audiobooks through its Amazon Prime Video, Amazon Music, and Audible subsidiaries.

This presentation aims to show the way of Amazon from start-up to global enterprise and how has the Amazon empire been built.
Cooperation between a Start-up and a Corporation – ZenCard and PKO BP

The operation of startups and corporations on the market can be compared to a war of superheroes, both factions have their strengths and weaknesses and are struggling to achieve the largest market share possible. The purpose of this poster is showing benefits for both sides of cooperation between them.

What is a Start-up?

Start-ups are young and agile, but they are just looking for their scalable and profitable business model. Corporations have a proven operating model and well-established procedures that allow them to operate globally and achieve systematic profits. However, they lack agility and creativity in creating innovations, which they are jealous of startups. On the other hand, start-ups do not have sufficient capital and scale to be able to compete with them on the market. The solution to this unwritten conflict can be the cooperation of these two worlds, joining forces and achieving common goals.

The basis of the services offered by ZenCard is a technology that allows you to replace your loyalty card with any payment card. The operation of connecting the payment card with the loyalty program takes place directly at the terminal, during payment.

The start-up potential was noticed by PKO BP and in 2017 ZenCard became part of the PKO BP capital group. The bank decided to use start-up’s product to develop the offer of its capital group. However, ZenCard remained a separate, technologically agile and rapidly developing project that provides new business value for the PKO bank.

The cooperation between ZenCard and PKO brought many benefits for both sides. Using the technology purchased, PKO BP completed its offer and strengthened relationships with customers, while giving entrepreneurs a modern tool that will help them take the chance created by progressive digitization. In addition, the purchase of new technology influenced a creation of the bank’s image as an innovative bank. ZenCard also benefits from cooperation in a measurable way. Two years after the start of cooperation, the start-up has grown twenty times. ZenCard has increased its impact ranges due to wide client base of the bank.

Summarizing, to achieve the largest market share, Start-ups and corporations do not have to fight each other. Cooperation between them brings more mutual benefits. The young company meets experienced mentors who will support it in developing the product. In turn, corporation acquires interesting ideas and completes its offer. A fresh start-up’s perspective allows corporations to approach a situation from a completely different perspective.

K. Barszczewska
Cooperation of start-ups with corporation – Synerise and Microsoft

The main objective of a small company is growing. They source a various funds to develop but often it could be not enough to establish cooperation with a big corporation. Nowadays, more and more young people decide to take a risk and they set up a small business called start-up.

A new company which has some structure and organization,
Created for the building of new, innovative products or services,
Created in order to search for a business model that can guarantee its growth,
There is at the development stage and actively seeking new markets.

Synerise cooperate with Microsoft for many years. Due to this, it brings many benefits from collaborative working. Synerise offering perfect solutions in the field of innovation and implement this solutions derivative on Microsoft Technology. The main purpose of this poster is to show how cooperation with corporation has a significant impact on start-ups development.

Synerise has won the 2019 Microsoft Country Partner of the Year Award for Poland.

The Microsoft Country Partner of the Year Awards honor partners that have demonstrated business excellence and reliability in delivering Microsoft solutions to customers over the last year. This award recognizes Synerise in effective engagement with local Microsoft office. They present innovation and business impact, increase customer satisfaction.

Partnership between Microsoft and Synerise is an excellent way to promote innovation. Microsoft deliver database platform called Microsoft Azure which allow process data and store data. On the other hand, Synerise revolve around cooperation with clients and implement AI Growth Suite services. It brought many benefits for both sides.

Synerise was also awarded the title of the start-up year by the Warsaw Stock Exchange.

Summarizing, thanks to mutual help and commitment of both sides Synerise is called one of the best companies using Artificial Intelligence Algorithm. Cooperations new start-ups and corporations has a significant impact from both sides. They can receive many benefits from cooperation, such as development, increase of market share and improvement of the company’s image.

WHAT DOES SYNERISE DO?

- Creating software for the automation and optimization of business processes (they are using Artificial Intelligence algorithms)
- They are innovative solutions in the field of broadly understood data processing
- Synerise is also the Honorary Patron of the Polish Association of Artificial Intelligence

The company’s activities include collection of data from mobile applications and monitoring consumer behavior on the websites. They are also using geolocation and analyzing information collected through call centers.

Cooperation of start-ups with corporation – Synerise and Microsoft

A. Bidas
MODERN, HIGHLY SUCCESSFUL MANAGING

How did it all begin?

It all started when mum of one of the creators of LiveKid had decided to run her own nursery. Then there was recognized the real workload associated with managing such a facility. LiveKid is the answer to an actual problem. It helps to organize things related to among others bureaucracy and it fits perfectly to the nursery’s managers needs.

What is LiveKid?

It is a modern solution, the entire facility management system in one simple application that definitely will let you save your time and also money.

LiveKid App makes running a pre-school facility so much easier!

Useful features

It posses the attributes that are helpful from director’s point of view and parent’s point of view as well. The platform improves the flow of information between parents and the institution, provides all the most important and necessary data, bills, etc. On the other hand parents can easily and quickly inform the nursery, e.g. about the child’s absence or child’s special diet that should be implemented.

Other innovative solutions

LiveKid Application will not only reminds of the bill that needs to be paid but it will also allows immediately paying for it. At the same moment, the nursery receives the information about payment.

Photos from trips and other fun stuffs using LiveKid can be shared with parents thanks to easy to use Photo Gallery available in Application.

From startup to a big company and a global investment

2017 - Jakub Pawelski was 17 then and studied in technical secondary school. His free time was spent on creating and improving application for nurseries. 2018 - ‘Forbes’ magazine recognized Jakub in ranking ‘25 under 25’ (it presents 25 ambitious polish people under 25 years old who are willing to change industry and have a big impact to making life easier). 2020 - a Cracow-based company LiveKid concludes a contract through which it acquires all rights to the Canadian application ‘Baby Manager’ becoming in the same time a global leader in providing systems for crèches and kindergartens.

Conclusion

LiveKid systems are used by over 100,000 parents every day and those systems gain more and more popularity every year. LiveKid’s history is very inspiring, especially for young people. It is a great example of a startup that in less than 3 years particularly thanks to acquisition of the Canadian application with similiar scope of possibilities became a corporation. It allows us to think that anything can happen when you do your best and belive in yourself. So if you will ever wonder if it is possible to become a global investment while starting your own business with (very often) a small capital, the answer is Yes! And it is highly likely that you won’t need to much time to achieve it!
NAMED AMONG THE FASTEST-GROWING COMPANIES

The main purpose of the poster is to present the codewise company, the way it took from start-up to corporation. The poster focuses on detailing the main aspects and values that have contributed the company’s development and success in the field of it.

HISTORY
- Codewise - a company founded by 3 colleagues in Krakow
- 2011: the beginning of cooperation between Robert Gryn and Codewise - validation of the first startup Webave.pl and later Zeropark
- 2013: Codewise on the verge of bankruptcy - buying the whole company outfit by Robert Gryn and Bartosiej Dawidow
- New product: Volum
- Dawidow’s resignation from continuing to run the company, Gryn as the owner of Codewise
- 2016: awards at the Deloitte Fast 50 ceremony for the fastest-growing company in Central Europe, with a growth rate of 13.022% over the past four years
- 2017: Robert Gryn as 57 among the 100 richest people in Poland (the youngest millionaire in history with the value of net assets of PLN 710 mn)
- 2017, 2018 and 2019 named by the Financial Times among Europe’s 1000 fastest-growing companies
- Participation in conferences, increase in profitability of Codewise, focus on own products -> success of Volum and Zeropark

MISSION
Developing innovative technologies that enable media buying teams and performance marketers to achieve their business goals.

VALUES
- Sharing the do-listen and can-do attitudes - listening to our customers and thinking bigger about their needs.
- Do the right thing and appropriate it rightly. Our customers expect Excellence.
- It all starts with A here. Working at Codewise means you are Awesome, Autonomous and Accountable individual who shares knowledge with others and understands that amazing team spirit is a value one of a kind.
- Professionals’ hiring with great technical and interpersonal skills who don’t need bosses but enables who give the directions.

PRINCIPLES
Value Driven Sustainability Do the Right Thing Empowerment Equal opportunity Integrity Inclusiveness

"WHEN SOMETHING DOESN’T EXIST ON THE MARKET IT DOESN’T MEAN IT CAN’T BE DONE"

Codewise and its founder Robert Gryn are an example of how thanks to hard work, commitment and the right attitude can be achieved success. Robert Gryn constantly repeats that only the right motivation, understanding and awareness of work will bring fulfillment and satisfaction. He is an inspiration for many young entrepreneurs. Codewise was founded in Poland - a country with a huge bureaucracy that discourages everyone from running your own business. However, following it’s founder; where there are problems, one should see opportunities for something new and better.

You can also achieve success and build a startup that will become an international corporation.

SNAPCHAT – BRILLIANT IDEA TURNED INTO REALITY

INTRODUCTION
There are many companies in the world that started as small projects and then developed and turned into huge corporations. Snapchat is an example of such a company. The main purpose of the poster is to present the history and Snapchat’s achievements.

WHAT IS SNAPCHAT?
Snapchat is one of the most unique applications that allows users to send photo, video and text message that disappears just after several seconds. The main goal of the application is to enable its users to share their private life with friends, while keeping maximum level of privacy. Users can set the display time of photos and videos. In addition, different part of Snapchat is MyStory. The content that users upload there disappears after 24 hours.

HISTORY
Snapchat was created by Evan Spiegel, Bobby Murphy and Reggie Brown in 2011. They were studying at Stanford University. It was allegedly Brown’s idea of a social media app. He shared his idea with Spiegel. They asked Bobby Murphy to write the code which was used to build the application. The same year in July, the application was launched and called Picaboo. Than Spiegel and Brown made Murphy to leave a company. After a few months, due to a copyright claim by a photo book company with the same name, Picaboo was rebranded as Snapchat.

VALUE
At the end of February 2020, share price of Snapchat was worth $14 and the company’s market cap is $20 billion. Snapchat’s revenue for 2019 is $1.72 billion. It is likely that thanks to appropriate management, Snapchat will be constantly growing and increasing its value.

USERS OF SNAPCHAT
At the end of 2019, Snapchat had about 218 million daily active users. The application is mainly used by people aged 13-24. About 61% of Snapchat users are female and 38% are male. The largest numbers of users using application every day:
- North America – 86 million
- Europe – 67 million
- Others – 64 million

DEVELOPMENT
In March 2016, Snapchat bought Bitstrips. It is a media and technology company which launched a spin-off app known as Bitmoji. That application allows users to create personalized stickers for use in messaging apps. In September, company showed their smartglasses known as Spectacles for the first time. In order not to be associated only with social app they changed their name to Snap Inc.

PROBLEMS
Unfortunately, Snapchat had a huge problems in 2013, when application was hacked by an anonymous group. Personal data of 4.6 million users was leaked. Snapchat apologized for a leakage and promised to repair the breach. Since then, the company hasn’t had any major security incident.

INTERESTING FACTS
- On average users of Snapchat open the app 30 times per day.
- Snapchat stories are created 400 million times per day.
- About 95% of app users claim that Snapchat makes them feel happy.
- Snatchatters spend 49.5 minutes per day on app.
- Every second about 20,000 photos are shared.
- Per minute 2,083,333 Snaps are sent.
- United State, France, India and United Kingdom are countries with the largest number of Snapchat users.

SUMMARY
Snapchat is an example that the ideas of young students can turn into a large and prosperous company. It is important that the idea is innovative and targeted at a specific group. Snapchat has more and more users, because people want to show part of their life on photos and videos only for a moment. In addition, Snapchat achieves great results despite the fact that is on the market less than 10 years.

Author: Joanna Ćwierz
The aim of this poster is:

-To show how start-ups in Israel look like,
-What contributed to the creation of the Israeli power of start-ups,
-How Israeli start-ups look like compared to other countries and some examples of interesting start-ups in Israel.

What does Start-up Nation mean?
Start-up Nation is a popular business term originated in Israel. Israel has the largest number of start-ups in the world and is the world leader in the percentage of the economy allocated to research and development (R&D). More startup companies are funded in Israel than in countries such as: United Kingdom, China, Japan or India.

Why Israel?
Despite the lack of natural resources, Israel belongs to a group of “very highly developed” countries. The country’s economy is based on the high-technology industry with a large scientific and research base. Thanks to this, Israel quickly became the second silicon valley leads the way in the dynamically developing high-tech industry.

Some interesting start-ups in Israel:

No Traffic – this start-up created a smart infrastructure application to reduce traffic jams and road accidents. It uses artificial intelligence by transforming any traffic signal into a smart infrastructure. This infrastructure is capable of traffic jams and road accidents. It uses artificial intelligence by transforming any traffic signal into a smart infrastructure. This infrastructure is cable of understanding the complete road traffic picture. This app collects data, analyzes streets, controls intersections and all road users in real-time.

MyHeritage – is a popular online genealogy platform. Users of this platform can search historical records and create family trees. Users can discover their ethnic origins and also find distant relatives thanks to advanced matching models. MyHeritage focuses on deliveries takeaway food by using drones. Flytrex tries to improve food and consumer goods deliveries through demand drone management service. This service cuts delivery times down to minutes.

Zeekit – creates a virtual dressing room. By combining fashion and technology Zeekit gives people the chance to see themselves in any item of clothing found online. This start-up uses patent technology, which relies on a person map created from photos uploaded by users to the site. Clothes are also export and finally, a new simulation is created. The final simulation shows a dressed person incorporating account body dimensions, size, and fit. We can also find a link to the page where we can buy the clothing online.

Summary:
The Israeli economic model based on high-technology can be an example for other countries. Because every country, thanks to the application of appropriate programs and support for the development of new enterprises, can become a leader of start-ups. Start-up Nation is showing the world how to use its potential and become economic powerhouse.

Startup can make life easier

The purpose of the article is to show that startups accompany people in their daily lives. Definitions and examples of the most popular startups in Poland and in the world have been presented. Tips for creating startups are described. The structure of the startup industry is presented in the diagram.

What is a Startup?
A startup is a young company founded by one or more entrepreneurs to develop a unique product or service and bring it to market. By its nature, the typical startup tends to be a shoestring operation, with initial funding from the founders or their friends and families.

Most popular startups:
★ Facebook initially was intended for pupils and students as a communication platform
★ LinkedIn is the top business-oriented social networking platform,
★ Spotify is a music service offering its users access to songs in the stream
★ Uber is a mobile application used to order transport services by associating the customer with the Uber driver
★ Airbnb is a platform that allows people to list, find, and rent lodging
★ Youtube is a website that allows free posting, rating and commenting on movies.

Success consists of going from failure without loss of enthusiasm.
Winston Churchill

Advice on building a successful startup:
1. Solve a problem you are passionate about
2. Decide on how you will fund your business
3. Create relationships with your customers
4. Improve the offer
5. Be flexible
6. Don’t get comfortable
7. Always play an active role
8. Be patient
9. Don’t do everything yourself

Some examples of Polish startups:
★ Sky Tronic was honored in 2017 during the European Start-up Days, in the IT related category, Indysutry 4.0. This company is one of the first companies in the world to work on drone control technology using artificial intelligence. The flight control and stabilization algorithms are based on FLC fuzzy logic controller. Thanks to this, it is possible to accurately monitor, evaluate and control the object in the same way as the human brain does. This means that in the future, unmanned aircraft control will be more precise and safe in difficult conditions, be it weather or off-road.
★ Vocablia is a notable start up in the group of the best Polish startups. This application is used to learn vocabulary from foreign languages, using specially prepared tests. It helps in the regular learning of foreign languages.
★ Mailgrupowy is among startups created for young people. This website has been created for students and is intended to exchange information, notes and materials for classes. It has options such as a shared calendar, chat, mobile application and many other amenities. This Polish startup has adopted the Turkish and Indian market, where it is used by students at almost 720 universities. This is a real success.
★ Explain Everything is an extremely creative Polish startup, which is an application for tablets, which is an interactive virtual board for creating animations. It is a highly intuitive product, enjoying great popularity in the United States, the best confirmation of which is that it is promoted by Apple.

Startup allows to check if the idea will be well received by customers at low cost. You can find out what is worth changing or improving in the company, and what ideas will not find their recipients. The successful startup allows for a rich life, guarantees satisfaction. Startup is a good way to try your hand at business.

Startup is the best way to live!

Conclusions
Ideas that have been implemented thanks to startups are applicable in everyday life.
Most of us can’t imagine our lives without Facebook. Uber helps us move around the city. YouTube provides us with entertainment and education. Music from Spotify is the soundtrack of our lives. Without these solutions, our lives would look completely different.

There is only one thing that makes a dream impossible to achieve: the fear of failure.
The purpose of the poster is to present the mechanism of operation of the unit which is a start-up. Over the years, these organizations have gained more and more popularity among entrepreneurs who want to offer their own (often innovative) products or services. For the purpose of creating this poster, the spelling of the English form was adopted - "start-up" in accordance with the Merriam-Webster Dictionary, spelling, https://www.merriam-webster.com/dictionary/start--up, accessed date: 11.04.2019.

**WHAT IS A START-UP?**

This term refers to a company that is in the first stage of operations. Start-ups are founded by one or more entrepreneurs who want to develop a product/service that is innovative and for which they think there is demand. Companies of this type usually start with high costs and limited income. They seek capital from various sources, for example: venture capital. Start-up projects are sometimes associated with a high risk of failure, but also a huge profit.

**LEGAL STRUCTURE**

Start-ups can take any legal form - they have no restrictions. To start with, they usually start with a sole proprietorship or a small enterprise.

**FINANCING**

An excellent credit history can allow a start up to use a credit line as financing, but this option carries the greatest risk in the event of failure. Banks usually offer several micro-loans - they are a short-term low-interest loan, intended for start-ups, among others. The least risky option is to raise funds among family and friends or take advantage of the so-called risk capital.

**LOCATION**

The location depends on the product or service offered - their activities can be carried out online, in the office (also home office) or in the store.

**SEVERAL STAGES CAN BE DISTINGUISHED IN THE ESTABLISHMENT AND SUBSEQUENT DEVELOPMENT OF A COMPANY:**

1. initial product or service concept and creation of business model assumptions
2. work on a product or service - prototyping
3. entering the product or service on the market
4. strengthening market position
5. stabilization of the company and the adopted business model
6. further development and expansion on the market

The factors that constitute barriers to establishing start-up companies are most often: a lack of skills related to organization and management of the company, necessary to start a business, or a lack of capital to start a business. However, this does not discourage them from acting. Everyone starts - regardless of age, gender, nationality or education. According to surveys, the average start-up owner is a 38-year-old man with a university degree, from a family of four, who has an interesting idea for a business and wants to use the experience gained in previous work.

The initial period of the first few years is very important for the start-up. Entrepreneurs must first of all find funds for their project, create a business model, hire the right people. Many of today’s most successful companies started as start-ups: Facebook, Ant Financial, Airbnb, SpaceX or Uber - are now listed on the stock exchange.

The leading start-up cities in Europe until mid-2019 were: London, Paris and Berlin. The capital of Great Britain has achieved over 320 initial investments, which makes it one of the most attractive cities in Europe. It is followed by Paris with 230 investments and Berlin with 129.

**STARTUP POLAND**

This organization was founded in 2014. It is one of the well-known technology think tanks in Central Europe. It was created thanks to a group of young Polish entrepreneurs and start-up founders. Their main goal is to represent Polish start-ups in dialogue with the government, parliament, the European Commission and local government authorities. Thanks to ambassadors operating in all voivodships in Poland, the organization reaches start-ups throughout the country. Partners of Startup Poland include: Google, Citi Handlowy, NCBR, Roche, PFR, Mastercard and Microsoft.

Every year in Poland and in the world there are more people having an idea for an innovative product or service. They set up their own enterprises and a small percentage of start-ups succeed. From a sole proprietorship, they quickly become an international corporation, often entering the stock exchange.
The Business Incubators as a chance for Startups' success

Many start-ups do not withstand market pressure and get lost in legal regulations, often at the beginning of their activity they need support to develop themselves. The answer to these problems are Business Incubators, thanks to which many companies have succeeded.

Business Incubators develop and support newly established enterprises. They are dynamically developing all the time, by supporting innovative and emerging enterprise.

But do we know how this cooperation works?

We can contact with the incubator via the online form available on the website or by the phone. Anyone can come to the Business Incubator and get the appropriate advice and support both at the consultation stage and after signing the contract.

Benefits of cooperation for the enterprise:
- The Business Incubator promotes the company its website
- Support of PR and marketing departments
- Startup promotions
- No commission on achieved revenues
- Lack of social insurance contribution
- The option of using the Incubator's logo

From startup...

Ekoenergetyka was founded in 2019 in Zielona Góra by two graduates of the University of Zielona Góra. A good idea and support of Business Incubator was enough to start the business. The company received support from the Incubator in the form of lending premises for the company's headquarters. They operate as part of the Academic Business Incubator of the University and Business Incubator of the City of Zielona Góra.

... to a large company

In 11 years since their creation they grew from 2 to 180 people, acquired customers all over Europe and are now a Central and Eastern European leader in charging technologies. The company has received many awards, e.g. Frost & Sullivan Best Practices Award, EY Entrepreneur of the Year in the New Technologies (Innovation category), Business Gazelles 2019 and Forbes Stars 2020.

The Business Incubators give startups a chance to implement their ideas, supporting their activities in many aspects and helping to overcome initial difficulties. They also allow the exchange of experiences with other entrepreneurs and offer an access to many preferential programs of their business partners. Thanks to them, many companies, including Ekoenergetyka, are successful both on the domestic and international market.

The Business Incubators as a chance for Startups' success

TRAVEL STARTUPS

IF YOU HAVE PLANNED A TRIP YOURSELF AT LEAST ONCE, YOU KNOW HOW LONG IT TAKES TO ORGANIZE IT. YOU’VE CERTAINLY HEARD ABOUT WEBSITES SUCH AS AIRBNB, TRIVAGO AND BOOKING. HAVE YOU EVER WONDERED HOW THEY WERE CREATED? DID YOU KNOW THAT FIRST THEY WERE STARTUPS AND NOW THEY ARE ALL KNOWN COMPANIES?

THE PURPOSE OF THIS POSTER IS TO GIVE YOU A LITTLE INSIGHT INTO THE ABOVE TOPIC - TO LEARN ABOUT THE HISTORY OF SOME OF THE MOST-KNOWN COMPANIES IN THE TRAVEL INDUSTRY AND TO MAKE THE READER TO REFLECT ON THE FACTORS THAT CAUSED THESE STARTUPS TO TURN INTO HUGE COMPANIES.

AIRBNB.COM

Airbnb is a global platform offering rooms, flats and houses for rent from private owners. It was founded in 2008. This startup’s story begins when two friends (Joe Gebbia and Brian Chesky) were looking for a way to make extra money. With the upcoming Industrial Designers’ Conference in San Francisco, there was a shortage of hotel rooms and accommodations. So the duo rented out their apartment loft to designers looking for a place to stay. They launched a simple website – airbedandbreakfast.com, and offered air mattresses (hence the name) and a homemade breakfast for $80 each night. A moment later, Nathan Blecharczyk joined the team. Unfortunately, after some time they didn’t have many reservations, so they fell into debt. They took a break and created presidential-themed breakfast cereals – The Obama O’s. The founders sold each limited edition cereal boxes for $40 a piece. Proceeds from their sale pulled the company out of debt, and information about the originators was found in national newspapers. In 2009, Airbnb is accepted into Y Combinator’s batch and receives $20,000 in funding. This was the turning point for the company. The site name has been shortened from Airbedandbreakfast.com to Airbnb.com and the offer has been extended.

To date, Airbnb has a valuation of $38 billion. It offers 6 million listings in 191 countries and regions all over the world. Airbnb has 31 offices across the world.

BOOKING.COM

Booking.com was founded in 1996 in Amsterdam as a small Dutch startup. Today it is one of the world’s leading digital travel companies. The founder was Geert-Jan Bruinsma. He gives 3 tips for good management:

1. Start from the problem, not from the technology.
2. Innovate in small steps.
3. Keep in mind the shortage that stimulates creativity (the limited capacity allows you to focus on the things that have the highest priority).

Booking.com has a dedicated team of over 17,000 employees in 198 offices across 70 countries. They offer 24-hour support in 43 languages, and more than 28 million total reported accommodation listings, including over 6.2 million listings alone of homes, apartments and other unique places to stay. They have over 1.5 million room reservations every day.

TRIVAGO

Trivago is an online hotel search platform that compares prices from various hotels on booking sites worldwide. The idea was born in 2005 in Düsseldorf, Germany by 3 university friends: Rolf Schrömgens, Peter Vinnemeier and Stephan Stubner. “Like most start-ups, the site’s first iteration was deployed from a garage.” Trivago was the first hotel search engine operating on the German market. At first, Trivago got one million Euro from investors. Then, they built up its first TV advertising campaign. Trivago ran effective TV advertising in home-nation Germany and utilized the income achieved to grow in Europe. In 2015, Trivago reported more than US$500 million in revenue.

Now, Trivago operates in 55 global markets and employs over 1,200+ talents. They offer over 3 million hotels and other accommodation in 190 countries.

DID YOU KNOW THAT...

... 90 PERCENT OF STARTUPS FALL IN THE FIRST 2 YEARS OF OPERATION?

... 3 NEW STARTUPS LAUNCH GLOBALLY EVERY SECOND MAKING UP 10 000 PER HOUR?

... STARTUPS WITH 2 OR MORE FOUNDERS, A BALANCED TEAM, OR WHO HIRED SKILLED EMPLOYEES TO DISTRIBUTE WORK ARE MORE LIKELY TO SUCCEED?

AFTER LEARNING ABOUT STARTUP STORIES, YOU CAN COME UP WITH ONE OF THE MOST IMPORTANT CONCLUSIONS: THE COMPANIES REMAINED ON THE MARKET AND THEN ACHIEVED A HIGH POSITION IN THEIR INDUSTRY BECAUSE THEY HAD A SPECIFIC BUSINESS IDEA, THEY HAVEN’T CREATED SOMETHING THAT HAS NEVER BEEN ON THE DOMESTIC OR GLOBAL MARKET, HAVE MET THE NEEDS OF CUSTOMERS. IN ADDITION, FOR STARTUPS TO BE SUCCESSFUL, THEY SHOULD TAKE SMALL STEPS, COLLABORATE WITH HARD-WORKING, MOTIVATED PEOPLE, AND HAVE THE ADEQUATE CASH RESOURCES OR INVESTORS.

Travel startups
K. Bachta
Uber Technologies, Inc., which everybody knows as Uber was established in 2009 in San Francisco as UberCab. Founders at the very beginning started by hiring private drivers, but if they would have followed that way, they wouldn't have developed the new type of transport which is now commonly known as peer-to-peer ridesharing. Currently Uber is not only a ridesharing platform but also for example a food delivery company (Uber Eats). Uber is an example of how simple idea can be transformed into a huge international company and success.

In 2013 Uber corporation introduced UBERMOTO in Paris. The only difference was a way that drivers were using motorbikes instead of cars.

Second attempt of introducing UBERMOTO has taken place in Asia where motorbikes are way more popular than in Europe, which is caused by a huge traffic. Unfortunately service was banned after 2 months by the government.

Both drivers and customers of Uber are able to rate each other. Of course only customer rating makes sense, because driver won’t bother if the customer is pleasant or not. When a new order is available, drivers are accepting it immediately, they don’t check any ratings. It looks completely different form the client’s perspective who has more time to make a decision.

**7 Lessons how we Can Learn from Uber’s Growth**

- **Don't be afraid to change conventions.** – first idea was to start Limo Timeshare service company, but it wasn’t their best idea. The second one was the 17 USD Billion idea (value after 5 years of Uber on the market), founders connected cell phone technology and cab – How simple is that?

- **Don't be afraid to aim high.** – Company achieved huge success in THE USA, but it wasn’t enough for them. After the America it was the time for Europe and after that for almost the whole world.

- **Respond to customers needs.** – Over the years Uber has faced criticism, for example for lack of necessary protection against sexual assaults. The company very quickly improved the protection of their customers.

- **Competitors on the horizon.** – Always build up your brand. Currently on the market you can find multiple ride sharing companiess but Uber was the first one and it’s still the most recognizable one.

- **Try to minimize deductible costs.** - Uber doesn’t hire commercial drivers, and therefore is reducing costs and gives possibility for non-commercial drivers to find a job or even a part-time job for students.

- **Always try to improve.** – The company is constantly exploring the market to find out another solutions, for example new innovations for their app.

- **Mission accomplished, but keep going.** - after the success for ride sharing company Uber added another service to their portfolio: Uber EATS.

In my opinion the history of this company and current status is an interesting case study. For 100% Uber Company used to be one of a kind. Let’s try to find similar companies which were established after Uber and have similar services. For sure we will get more than 2 with almost identical services in the portfolio. The History of this firm may be a perfect lesson for people who want to start up some brand new business or give a new touch for already existing one.
The purpose of the poster is to approximate the term "unicorn" concerning to startups and to present the company that has achieved this name and which became one of the most valuable among other in the trade.

The history of Classpass

In 2013, the ClassPass application was created, which offers services based on monthly renewed membership and guarantees access to various sports activities, in various schools and fitness clubs, as well as wellness centers. Currently, platform members can book participation in over 5 million sports activities each month.

What is the unicorn in the startup world?

Unicorn is a startup valued at least one billion US dollars.

The founder of ClassPass is Payal Kadakia, the daughter of Indian immigrants who was born in 1983 and grew up in New Jersey. She is a dancer. She graduated of the Massachusetts Institute of Technology. In 2008 she built her first company, which was dance company. After being frustrated by the process of trying to find ballet classes online, she was inspired to build her own app.

Only 1% of startups has a chance to become a unicorn, of which only a few were founded by women.

Startup of the company

In the past 18 months, the company has been on an expansion tear, going from four to 28 countries. It now boasts more than 30,000 boutique studio, gym and wellness partners. With funding round it has raised $285 million, pushing its valuation above the $1 billion mark, officially making it a "unicorn." ClassPass seek to double its presence in Europe and develop the platform in countries in Central and South America.

Conclusion: The name "unicorn" is an unusual distinction that only a few startups can boast of. As the ClassPass story shows, even a prosaic problem can become an inspiration to create something that will turn into an extremely profitable business. With enough among of passion and persistence Payal Kadakia perceived a market opportunity and turned it into company worth millions.

Classpass - how to become a unicorn in the startup world
M. Fiejdasz, A. Golonka, S. Grabka
UBER as a perfect example of start-up company

Uber is an application that allows you to associate with each other a person who is currently looking for transport (and is registered in the customer database), and a driver belonging to the database. Uber's value is estimated at USD 68 billion. It is called the most expensive start-up in the world. The application currently is being operated in 633 cities in 65 countries around the world. In Europe, Uber is in 85 cities. This poster will be a lesson for start-up and show in which aspects other firms should go forward with UBER.

High security technology
adapt relentless changes in industry to operate in

Mouth marketing
Word of mouth has played a huge role in Uber's growth. Except normal marketing, start-ups should use mouth marketing to reach new customers. Normal advertisement reaches handful of people but it ends at the moment when ad is taken down. If company does well, customers talk about this and recommend to others. Customers trust feedback from colleagues and co-workers, so they will use service then. What is more, this kind of marketing is free. Startups should use this technique to its fullest potential when they grow their customer base.

Favourable working conditions
Company should be created an attractive package for employees to encourage them to cooperate and distinguish them from the competition. To attract highly qualified employees entrepreneur should offer adequate remuneration. Uber employees can benefit from flexible working hours, which is an additional advantage for those who want to make extra income.

Unstoppable changes
The market is constantly evolving. Law, technologies, market regulation are regularly changed. For a new company, it is very difficult to adapt and update any changes. For many of them changes may be too radical. Our company has to face these problems and adopt changes in a short time. For example customers expected high quality and competitive prices. In Uber's strategy, the most important thing is to adapt changes quickly and meet customer expectation. It is necessary to achieve success.

Lessons given by UBER to start-up companies

Decentralization
The lower level of management knows what action needs to be taken to make the services offered attractive to customers, so the manager must trust his or her employees to be able to entrust them with making decisions that will ensure the proper functioning of the company. Delegation of decision-making is particularly important when a company operates in several countries, as the manager may be unaware of exceeding the rules that apply there. In this situation, possibility to local managers make decisions is very important for the whole company.

UBER is a pioneer
One of the most important think for companies is being first on the new market. Thanks to that start-up company could be stronger than other competitors. Company for example Uber can do market research, identify market conditions and create brand recognition. For a start-up company very important is to be faster than competitors. Uber is one of this type company, which uses competitive advantage by being first on the market. This difference helps Uber to achieve much higher revenue than other companies, start-ups, which entered the market much later.

There are many points where start up should look for possibilities to grow up at the market. They should look for not only obvious solutions but smart one. UBER shows how start up should invest their money and become one of the most popular company on the world.

Not elegant but simple
Elegant business models are rarely very often means complicated and this causes that there are more ways for things to go wrong. Start-ups should look for innovation which helps them avoid complications. Start-ups should innovate which may increase their performance. UBERs learn that start-ups should think about clear vision (not complicated), provide communications procedure, provide internal controls, control feedback and everything should go fine.

Access to technical resources of large companies

**PKN Orlen**

It is one of the largest players on the fuel and energy market, the largest company in Central and Eastern Europe. It operates on 6 countries.

**Mission**

By discovering and processing natural resources, we power the future.

**PKN Orlen’s main competitors are:**
- BP
- Shell
- Statoil
- Lotos
- Lukoil

**The suppliers of PKN Orlen are:**
- GlenCore
- Energy UK Ltd
- Socar Trading S. A.
- Mercuria

**The buyers of PKN Orlen are:**
- Individual clients
- Business clients
- Wholesale clients

**CLOSE SURROUNDINGS:**

The priority is to develop to social needs, the responsibility of business partners and clients by sharing good practices, knowledge and implementing new standards.

**DISTANT SURROUNDINGS:**

This is the area in which PKN ORLEN set itself the task of implementing strategy and promoting innovation, setting the highest industry standards in the field of business ethics and environmental protection.

**PILLARS OF THE PKN ORLEN STRATEGY**

- Security of raw materials
- Operational excellence
- Strong market position

- Employee initiative
- Internal Innovation
- External innovation - acquiring startups

- Strong foundations
- Secured financing
- Dividend payment

The Participation in acceleration programs allows to combine the potential of startups with experience, infrastructure and PKN ORLEN resources. Programs help to develop mechanisms and procedures in the organization to obtain innovation from outside and accelerate their implementation in operational activities.

Influence of further business environment on the start-up
E. Gwizd, K. Janus, G. Jarosz
Becoming a benefit corporation has advantages for every stakeholder in your business, from consumers and talent to shareholders and directors. And, in an era where so many are trying to be authentic and sustainable, becoming a benefit company helps you stand out from the crowd by demonstrating your commitment to your employees, your community, and the environment.
Gamification in business

The goal of this poster is to give the explanation of Gamification and provide the brief view on its use in corporate environment and startups.

Gamification is defined as the application of game design elements in non-game contexts to motivate participation, engagement, and loyalty. Gamification techniques are designed to leverage people's natural desires for socializing, learning, mastery, competition, achievement, status, self-expression, altruism, or closure, or simply their response to the framing of a situation as game or play.

Gamification in corporate environmental:
- Gamification is used in setting and achieving business goals.
- Corporations use gamification techniques in almost every area of their business. Elements of gamification are used, among others in recruitment, sales process, marketing and corporate training.

The use of gamification in selected processes in organizations:

Employee training
Employee development programs
Onboarding
Sales training
Manufacturing training

Gamification in startups:
- Basing on gamification can be one way to stand out from the crowd of startups.
- Startups use gamification as one of the strategies to increase product value in the eyes of the customer, which allows them to manage customer engagement and loyalty.
- A common problem for startups is the lack of funds and difficulty in paying content creators salary, the solution is gamification, people reward each other (badges) and gain the favor of the community, winning a place in various rankings.

Benefits of gamification for business:
Gamification is widely used in various business areas, regardless of the size of the company. Its use bring real benefits for the company:
- Increase customer retention
- Improves productivity
- Increases motivation
- Encourages creativity
- Enhance synergy and collaboration
- Increase involvement
- Transmits corporate image
- Drive innovation

How to develop start-up to become corporation

K. Jarosz, D. Kubacki, M. Musiał
Human Capital Management

HCM is concerned with obtaining, analysing and reporting on data that inform the direction of value-adding people management, strategic, investment and operational decisions at corporate level and at the level of front line management.

How to implement it?

Create employee profiles
They allow managers to collect and store important employee information in one place.

Embrace mobility in the workplace
Mobility provides employers and employees alike the flexibility to work from anywhere, at any time.

Streamline employee onboarding
The onboarding process serves as a new hire’s first impression of a company, which stresses the importance of having a smooth onboarding system in place.

Revive the performance
Employers should strive to build a regular feedback culture by incorporating self-ratings, peer reviews and manager assessments into the HCM system.

Offer unlimited PTO
Flexible paid time-off policies simplify HCM by eliminating the tedious process of calculating vacation accrual and tracking employee absences.

Human Capital Management is important for:

- Hiring the right talent
- Orienting him/her to the organization
- Making a new employee feel comfortable
- Training employees in order to constantly upgrade their skills
- Retaining employees
- Making employees self sufficient and prepare them for adverse conditions
Information Management vs. Knowledge Management

**Information Management (IM)**
- Focus on data, information, facts and figures
- Technology driven
- Articulated, well-defined, easy to identify and share
- It offers a fact that you can then use to help create useful knowledge, but in itself that
- Is easy to copy – due to its codified and easily transferrable nature

**Knowledge Management (KM)**
- Focus on knowledge, understanding and wisdom
- People driven. Supports communities and group learning
- Unarticulated, hard to identify and share
- Is largely about knowing, know-why and know-who
- The connection to experience and context makes tacit knowledge extremely difficult to copy

**Differences between IM & KM**

**Information management**
- Focus on data, information, facts and figures
- Technology driven
- Articulated, well-defined, easy to identify and share
- It offers a fact that you can then use to help create useful knowledge, but in itself that
- Is easy to copy – due to its codified and easily transferrable nature

**Knowledge management**
- Focus on knowledge, understanding and wisdom
- People driven. Supports communities and group learning
- Unarticulated, hard to identify and share
- Is largely about knowing, know-why and know-who
- The connection to experience and context makes tacit knowledge extremely difficult to copy

Information management focus on activities needed for controlling organisation’s records. This is done through managing information resources, and IT resources can be used. People are important but not a critical resource. On the other hand, knowledge management has people as a critical component to be managed. KM is oriented to improve the organisational performance and to add value through a set of key-process (mainly knowledge sharing). Through diverse sets of knowledge management systems, companies can preserve, spread and further develop valuable ideas. It depends on company’s core competence if they need knowledge or information management.

Information Management vs Knowledge Management
J. Kołodziej
Knowledge Management

Knowledge Management is a vital source of sustainable competitive advantage for enterprises and has more positive influence on firm performance. KM allows for the integration of people and knowledge to create values from both organizations' intangible and tangible assets. This integration allows for new business opportunities to be identified and developed through the use of knowledge gained from the knowledge worker (expert) quick and easy access to the needed knowledge at any time and under any circumstances, that is, ensuring the needed knowledge always gets to the right place, in the right format, at the right time, and the implementation of more efficient and effective processes through the continuous learning. It also helps to better share the knowledge with the different stakeholders which can significantly improve existing relationships or create new ones. For example, improved customer relationships would normally result in better customer loyalty and better organizational public image. It helps to enhance the collaborative effort expected from employees, encourage continuous development of people capabilities through individual or group learning, and promote organizational learning for improved production and services offering, and the overall resulting effect on organizational performance.

Knowledge Management is essentially about getting the right knowledge to the right person at the right time. This in itself may not seem so complex, but it implies a strong tie to corporate strategy, understanding of where and in what forms knowledge exists, creating processes that span organizational functions, and ensuring that initiatives are accepted and supported by organizational members. Knowledge management may also include new knowledge creation, or it may solely focus on knowledge sharing, storage, and refinement.

Knowledge Management is the currency of today's economy and the crux of knowledge management, which in turn is the linchpin of modern-day organizations. It has been used since 1990s as a tool to achieve sustainable competitive advantages and greater performance. and now, it is becoming an essential asset to sustain organizational competitive advantage and a vehicle for continuous progress and innovation. It is every organizations objective to be able to grow and progress whether it is an SME or a large enterprise so to ensure that there is return on investment to the shareholders and this objective can be met through sustainable superior organizational performance. There are many determinants that may influence organizational performance operating in the current economy but one that is being increasingly recognized as vital is knowledge management.

In the knowledge-based economy era, superior organizations depend more on their knowledge-based resources to survive and to cope with the changes. Therefore, the Knowledge Management (KM) implementation is increasingly becoming a vital power to improve Organizational Performance for various organizations. According to Resource Based View and Knowledge-Based View theories, knowledge is a key resource for survival, stability and growth of the organizations.

It can be appreciated that this current economy is quite dynamic, where resources value gaps are becoming much tighter as marketplaces are becoming increasingly competitive and the rate of innovations is rising. Relevance of KM and Subsibilidad identified four forces as the forces driving the need to manage knowledge in this current economy.

*Increasing Domain Complexity* which means the knowledge required to complete a particular business task just becomes more complex;
*Accelerating Market Instability* which means the rate of change in market trends has increased significantly over the years to the extent that market changes may happen overnight;
*Intensified Speed of Responsiveness* which means that decision makers are now given much less time to respond to the market changes otherwise risk losing business opportunities;
and finally *Employee Turnover (Diminishing Individual Experience)* which means that employee mobility is even greater than before thus leaving organizations with major challenges of maintaining their intellectual capital.

Knowledge management strategy must be dependent on corporate strategy. The objective is to pass on, share, and create relevant knowledge assets that will help meet tactical and strategic requirements.

Management & Leadership: KM requires competent and experienced leadership at all levels. There are a wide variety of KM-related roles that an organization may or may not need to implement, including a KM officer, knowledge manager, knowledge broker, and so on.

Strategic Culture: The organizational culture influences the way people interact and understand in which knowledge is created and shared. It may not only have a direct impact on individuals and ultimately the way they share knowledge.

Organizational Processes: The right processes, environments, and systems that enable KM to be implemented in the organization.

Technology: The systems, tools, and technologies that fit the organization's requirements, properly designed and implemented

Politics: The long-term support to implement and sustain initiatives that involve virtually all organizational functions, which may be costly to implement and which often do not have a directly visible return on investment.
Public Support Instruments of Cooperation between Big Corporations and Start-Ups

The main purpose of our poster is to answer the question: „What are the main advantages of such cooperation between corporations and startups and what form of support may startups expect?”

**METHODS, WAYS AND TOOLS OF COOPERATION**

- Incubators
- Accelerations
- Corporate venture capital CVC
- Technological parks
- Hackathons
- Workshops
- Mergers and acquisitions

**BENEFITS**

- Improving company’s image
- Development and testing of new technologies at a lower operational costs and risk
- New resources
- Technical knowledge
- Access to new markets
- Financial and investments profits
- Business growth

There are many methods of cooperations between startups and big corporations. Choosing the best one depends on an individual approaches and business characteristics of each organization.

**Scale Up**

Scale Up is a supporting program which task is to succor startups. His aim is to provide experts help in financial and investments areas and to enable contact with big corporations, including state-owned companies.

**List of other supporting programs:**

**SUCCESSFUL COOPERATIONS**

- **Due to cooperation PRO BP have improved data digitization system powered by IC Solution which allow saving all documents in electronical version. StartUp provide the system of IC pen and software which support this process. In the result of cooperation**

- **Effect of cooperation between PZU and Raccoon is introducing of a new patients rehabilitation technique. New method is based on gamification. Due to cooperation range of offered servises increased, which caused that organization gain more clients.**

- **Enelion is a polish producer of electrical cars chargers. Cooperation based on improve new system which help to increase efficiency of charger network. Thanks to this collaboration Orlen S.A. offer their services not only for combustion cars but also for electrical cars.**

**Summary**

Ability to make contacts and cooperate is crucial for both newly formed and already growing startups. There are used many useful methods and tools to find investors. Starting cooperation with big enterprises might be a milestone for each startup. As the past shows, benefits resulting from it are really huge.
The aim of the presentation is to show how Selvita became multinational biotech company.

INNOVATIVE PROJECTS

SEL120:
Selvita’s second largest project for the treatment of AML and other rare oncological diseases worth 130 million PLN

September 2019 - first clinical research (first patient)

SEL24:
First of the most advanced project currently investigated for the treatment of Acute Myeloid Leukemia
March 2017 – first-in-human entered

POZNAŃ
Contract with the Adam Mickiewicz University in Poznań for renting laboratories in the buildings of the Wielkopolska Center of Advanced Technologies

SAN FRANCISCO
Selvita Inc. with head office in Cambridge, Massachusetts - renewal of cooperation contract from 2016 with University of California in San Francisco (UCSF) for next 3 years.

Universities

Greater Boston Area the first foreign office in the neighborhood of Massachusetts Institute of Technology, Harvard University and medical centers

Cambridge
Cambridge cooperation from 5th of May 2015 is focused on supporting and developing business relationships with local partners

Selvita’s competitive advantage is a result of its activity in highly innovative area. Biotechnology segment is advanced technology and being its leader is an incredible success for small start-up from Cracow.
Advantages of the split payment for start-ups

The possibility of obtaining VAT compensation more quickly - the standard refund period for VAT is 60 days. If it is indicated that the refund is to be sent to the VAT account, this period is reduced to 25 days.

The possibility of reducing VAT liability - this right will be available to entrepreneurs who will pay the VAT amount fully from their VAT account before the statutory due date. The amount reducing the VAT liability results from the formula set out in the Goods and Services Tax Act.

Entrepreneurs, who pay their liabilities using split payment are protected against additional VAT liabilities. These penalties may be imposed by the tax authorities where a VAT return is not submitted or where significant errors are detected in it.

Disadvantages of the split payment for start-ups

The use of split payment can contribute to blocking additional funds in the VAT account. These funds can not be used for the continuation of business activities, including subsequent business transactions. This may lead to serious financial difficulties for start-ups and make their business development significantly more difficult.

Failure to use the obligatory split payment to settle certain transactions is punishable by high legal sanctions.

Entrepreneurs can use the VAT account free of charge. The obligation to set up and maintain the VAT account is imposed on the Polish commercial banks. Due to their losses, likely, the fees for maintaining already existing settlement accounts will gradually increase.

Conclusions

Despite of the many clear benefits of the split payment method, it may harm the financial situation of start-ups. Blocking additional funds on the VAT account or increasing bank charges can impair their financial liquidity, prevent further business transactions, and hamper market development.

Split payment – the influence on start-up activities
L. Ryczek
The purpose of the poster is to present the startup lifecycle and the possibilities of financing their activities at different stages of their development.

**What is a startup?**
It is an innovative company founded to develop a unique product or service and bring it to market.

**SEED**
- The startup has a prototype of its own product started offering the finished product on the market.
- The need for external financing, due to increasing expenditures.
- The startup has not yet exceeded the break-even point.

**EARLY STAGE**
- Increase in profitability of sales.
- The startup strengthens the market position.
- Increase in development expenditures – the need for external financing.
- Low profitability – no possibility of self-financing.

**EXPANSION**
- The startup imitates independent companies with an established market position.
- A more mature business model than in previous phases.
- Exit stage of high-risk investment funds.

**LATE STAGE**
- A proven business model.
- High profitability.
- Reduced operational and investment risk – greater opportunities to obtain financing.
- Financing ceases to come more from equity because foreign capital becomes more available.

A very important source of funding affecting the functioning of startups is **crowdfunding**, which is a source of funding available at all stages of their development.

**CONCLUSIONS**
An inseparable part of a startup is the existence of different stages of development, which present a specific development cycle of the business, resembling the product lifecycle. The availability of funding sources depends largely on the stage of development of the startup. With each successive stage, profitability increases and investment risk decreases, making it easier to attract investors.
Systems Management

**Systems management** is the administration of the information technology systems in an enterprise data center. IT systems management is usually overseen by the chief information officer (CIO) or chief technology officer (CTO).

- **Asset Inventory:** It helps in asset lifecycle management, keeps a record of hardware.
- **Network Monitoring and Management:** This includes monitoring of network devices.
- **Application Monitoring**
- **System administration:** Monitoring and management of servers.
- **Log Management and Performance Analytics:** It helps you collect, correlate, and analyze the system’s.
- **IT Security and Compliance:** This task is in charge of running anti-virus and malware tools.
- **Automation:** This might include automated backups and restores, automated workloads, or desired configuration states.

**What elements of IT Can Systems Management help you with?**

A **Systems Management** tool or software suite can help your IT environment to stay online and run smooth. It is the most important element of an IT-based organization and your success!
Human Resource Management is used to maximize the performance of employees by executing various strategies. It is the practice of recruiting, hiring, deploying and managing an organization’s employees. HRM is often referred to simply as human resources (HR). A company or organization’s HR department is usually responsible for creating, putting into effect and overseeing policies governing workers and the relationship of the organization with its employees.

The role of HRM is to manage the people within a workplace to achieve the organization’s mission and reinforce the culture. When done effectively, HR managers can help recruit new professionals that have skills necessary to further the company’s goals as well as aid with the training and development of current employees to meet objectives. A company is only as good its employees, making HRM a crucial part of maintaining or improving the health of the business. Additionally, HR managers can monitor the state of the job market to help the organization stay competitive. This could include making sure compensation and benefits are fair, events are planned to keep employees from burning out and job roles are adapted based on the market.
Startups and global corporations are the two opposite poles of economic activity. Startups are associated with new technologies and innovations that build company structures around an idea. A young, innovative company whose functioning is usually based on new technologies that work in conditions of extreme uncertainty and whose purpose it is to create a scalable business model.

Corporations are huge, experienced companies with an international reach. They generate very high profits, and employ a large team of specialists.

CREATING AN IMAGE OF A MODERN COMPANY
Organizations see what value comes from placing the brand as innovative. However, when it comes to cooperation with startups, this goal is declaratively not their main priority. It often turns out to be important for the organization itself.

Sometimes enough that it is the main reason for starting building relationships with startups or in general. Today, image-building operates become important for another reason. When it comes to cooperation with startups, it is the highest priority, but it is also understandable, not because of the organization, or the other. The organization’s image in the communication outside must reach for more direct business cooperation in the work example.

COMPLETION OF THE COMPANY’S OFFER
Startups are willing to adopt their solutions to the needs of a large business partner, which is why they are often a source of new technologies and solutions that are complementary to business run by companies or company’s offers.

MONITORING THE SITUATION ON THE MARKET
It can take various forms - narrowing down the customer, stagnation, financial failure, or other. Searching for innovation gives you the opportunity to capture certain trends that appear in the area of technology. You can also say that it increases efficiency.

ENRICHING THE WORK CULTURE IN THE ORGANIZATION
Startups can and want to affect, although rather indirectly, how the entire company operates. When a dynamic individual enters the corporate structure, ideas, style of work and work organization are changed, as well as approaches to the process. Departments working with startups and for innovation have enormous responsibility - they must make the entire company start implementing greater solutions that accept them as something positive.

OPTIMIZATION OF INTERNAL PROCESSES
We are talking here not only about the internal processes of the organization, but also about the processes in which the company’s clients participate. The challenge is that the change in existing processes disrupts the entire status quo, raises anxiety and can translate into resistance to its introduction. As creating disruptive innovation (i.e., one that completely changes the way the company operates, one that brings significant profits) make a corporation extremely difficult, among others because people from an organization often think of its limitations, than the well-established business starts to look for such solutions outside, and more precisely among startups.

CREATING SOLUTIONS
It is known that start-ups are not perfect at the beginning of their development path. They are often not perfect after many years. However, they have such an advantage that their work is not inscribed in complicated procedures - so they work more efficiently. Thanks to this, they make things that would be handled inside the corporation for years to come up much faster - maybe they are not perfect, but they are complete.

On the other hand, in the DNA of the large companies there is no big progress to take. At least not at the stage of development. Replicating some ideas with internal chromosomal may take from half a year to even several years, and may still fail. This is enough time to lift the enthusiasm of even the greatest enthusiast. Work with a startup helps to verify some concepts many times faster than procedures binding inside the large organization.

LEARNING
Testing ideas is not only a possibility of avoiding a no-go, but it is also a chance to get to know the customers better and the needs that should be radically tackled to meet business expectations.

Cooperation with startups is the key to a great contribution put into making a lot of fast and business-friendly business processes, and to learn a lot about potential new development paths. Agility and new work methodologies are an added value.

Why corporations and startups need to work together?
K. Madej, K. Puzia
How to turn into a powerful company from scratch?

The goal of our poster is to show the stages of start-up development from scratch to a powerful company. Moreover, we would like to show the features of an entrepreneur who wants to be successful, as well as the opportunities offered by running a startup.

Authors: Kamińska Edyta, Krupa Joanna, Karpierz Magdalena.

What are the advantages and disadvantages of startups?

**ADVANTAGES**
- agility
- efficiency
- personalization
- versatility
- flexibility
- having fun
- * Know yourself as an entrepreneur before you start
- * Original business idea
- * Strong and stable scratch
- * Capital base

**DISADVANTAGES**
- risk of failure
- low compensation
- stressed out
- poor market access
- team conflicts
- lack of processes
- * Setting up the right legal structure for business
- * Understanding financial, accounting and tax obligations

* Proper management of the company
* Appropriate microeconomic and macroeconomic conditions
* Testing business premise in the real world

What are the features of successful entrepreneur?

- creativity
- initiative
- self-discipline
- organizational skills
- leadership abilities
- decision making skills
- persistence in goal striving
- strong need to succeed

SET A GOAL
AIM HIGH
TAKE CARE
ACHIEVE SUCCESS!

The develop of startup is everlasting process. Like all butterflies have “complete methamorphosis”. To grow into an adult they go through stages: egg, larva, pupa and adult. Each stage has a different goal - for instance, caterpillars need to eat a lot, and adults need to reproduce. The startup journey isn’t easy. The steps, however, if planned correctly can make this journey a lot easier and enjoyable.
Most students are afraid of working in corporation because of their imagination about this work place. This poster is a comparison myth and facts that are popular among young people these days.

**FACTS**

- **higher salary** - in corporation you can earn more money than in private company
- **benefits** - health insurance, paid vacation, fruits
- **deadlines** - this is what corporations love the most
- **repetitive duties** - some tasks are unchanged
- **a lot of procedures** - every corporation has its own book with rules
- **prestige** - it is great work experience especially for young people
- **flexible work time** - opportunity to choose working hours. It is possible to start your work at different hours.
- **home office** - opportunity to work at home
- **possibility of self-development** - you have your own budget which you can spend for courses
- **corporate jargon** - special words or expression used in some profession or groups, outsiders have problem with understanding it

**MYTHS**

- **work only for specialist** - you don’t need to have a large experience in your work area
- **business dress code** is going to be forgotten
- **only for people with native level language** - on junior positions in reality you need to only be able to communicate by writing
- **only for people with appropriate background** - you don’t need to have directional education if you know a language
- **only work** - corporations organize also a lot of events for employees

As we can see there are a lot of facts and myths. They exist because of our way of thinking about corporation. For many people is a scary place, where people only fight among themself about their positions. In our opinion for sure there is a lot of work with many benefits so young people should not be afraid and go to fight for their future.
From small start-up to a global brand - how Airbnb made it

Airbnb is an online listing service that connects people who want to rent out their homes with people who are looking for accommodations.

- **500M** guests have access
- **6M** unique places to choose from
- **81000** cities and 191 countries covered worldwide
- **$65B** Hosts have earned from leasing out space on the platform
- **152%** growth in the number of rooms available on its platform

- **2008** Airbnb launches the IPhone App and Instant Book feature
- **2009** The formal AirBed & Breakfast launched
- **2010** Airbnb begins international expansion, reached unicorn status
- **2011** AirBed & Breakfast changes its name to Airbnb and expands beyond just rooms
- **2012** Airbnb launches the Wish Lists Feature
- **2013** The White House appoints Brian Chesky as Presidential Ambassador for Global Entrepreneurship
- **2014** Launches the #weaccept campaign in response to the refugee ban and launches their Chinese brand - Aibiying
- **2015** Announces the launch of Trips and welcomes 7000 attendees from over 100 countries
- **2016** Launches Airbnb Plus and Airbnb Concerts, Airbnb celebrates 10 years
- **2017** Airbnb signs agreement to acquire Hotel Tonight
- **2018** Ready to go public with IPO
- **2019** Airbnb announces their "Natiivo" line of condo hotels

Airbnb has come a long way during which successively, in small steps, it became an ever larger company that is currently achieving huge results.

Sylwia Szewczyk
Karolina Rojowska
Bartłomiej Słowik
The purpose of the poster is to present a start-up that has been successful thanks to the good idea and commitment of its founders.

Company and idea
It all began with Elon Musk announcing a competition for the design of a new mode of transport called hyperloop. Students from the Warsaw University of Technology decided to take part in it. They managed to reach the final of the competition twice and even tested the prototype of their machine at SpaceX. In part, based on a university team but supplemented with people with business experience, the company Hyper Poland was founded in 2017. Hyper Poland develops the next generation of High-Speed Railways (HSR), based on magnetic levitation, linear motor and autonomous control systems, which can be subsequently transformed into a vacuum version. The company’s goal is a quick, phased implementation of hyperloop-inspired transportation technology within railways’ systems using existing railway corridors and regulations. The implementation of the hyperloop concept is to take place in three stages: magrail, hyperrail and hyperloop.

Magrail
The magrail system is a unique magnetic rail technology operating on existing railway tracks at a speed of 300 km/h - 415 km/h. This hybrid solution allows both magnetic vehicles and conventional trains to operate on the same lines.

Hyperrail
The magrail system can be subsequently transformed into a vacuum version - hyperrail, allowing movement with max. speed of 600 km/h on regular lines and 1000 km/h on High-Speed Lines.

Hyperloop
The last stage is a vacuum railway (hyperloop), which will require a new, dedicated infrastructure and vehicles will move at speeds up to 1200 km/h. It is a combination of an airplane and a train. The pod moves in a special tube, in which air pressure is as low as it is at an altitude of 10 km, which greatly reduces air resistance. It travels without contact with the tunnel using magnetic levitation and air bearings.

Prototype
On October 22, 2019, a demonstration of a magrail vehicle on the test track took place in Warsaw. The 48-meter track was made on a 1:5 scale, with key elements much closer to the target: a 1:1 linear motor and a 1:2 magnetic track. Completion of the construction of the first full-scale test track and vehicle is planned for mid-2021.

Equity crowdfunding as a funding source
Equity crowdfunding enables individual investors to invest in innovative projects. For fast-growing companies, it is an alternative way to raise capital from many investors. In this case, the project is financed by a large number of one-off payments made by persons interested in the project, who in return receive rights to the company’s shares.

Hyper Poland was the first Polish company to organize a crowdfunding campaign on a foreign platform - in this case on the British Seedrs website. During the campaign in the second quarter of 2019, the Polish company collected EUR 330,000 from 470 investors from 30 countries. In the second collection, which began in February this year, the company collected over EUR 530,000, which was 118% of the target.

As part of the second financing round, the company was valued at EUR 13.5 million, or approximately PLN 58 million. Even during the first collection, the valuation was at the level of EUR 7 million.

Conclusion
We can safely say about Hyper Poland that it is a start-up that has achieved success. This was accomplished by using the existing concept of a super fast means of transport - hyperloop in such a way that it will be possible to implement it in stages. Careful and detailed project development and commitment to its implementation drew the attention of investors providing funding necessary for the development of each start-up.
Every Startup needs money to fund its initial business. It is necessary to finance initial implementation activities, purchase of equipment, materials and payments for employees already employed. Most entrepreneurs think first of bank loans as the primary source of money, only to find out that banks are really the least likely benefactors for startups. The purpose of this poster is to present selected methods of financing Startups.

### Self-funding
- Self-funding is an effective way of start-up financing, especially when you are just starting your business. The great thing about using your own money to start up is you don’t have to ask anyone for help and not starting out in debt.

### Friends and family loans
- Family and friends will probably help you and lend you money. However, in order not to cause conflicts, you should ask these people for help when you have a ready-made business plan and financial forecasts for the future. In this way, your family and friends will believe in your possible success.

### Crowdfunding
- Crowdfunding is the use of small amounts of capital from a large number of people to finance a new business venture. The most well-known crowdfunding websites for startups are Kickstarter, Seedrs and CrowdCube. All these sites charge a fee of 5–7% of what you raise, but these fees are only deducted if you reach your funding target.

### Business Angel
- Angel investors are individuals with surplus cash and a keen interest to invest in upcoming startups. They can also offer mentoring or advice alongside capital. Angel investors have helped to start up many prominent companies, including Google, Yahoo and Alibaba.

### Grants
- A grant is an award, usually financial, given by one entity (typically a company, foundation, or government) to an individual or a company to facilitate a goal or incentivize performance. Grants are essentially gifts that do not have to be paid back, under most conditions. Grants tend to be very industry-specific.

### Government programs
- Governments often offer the financial support for people who are eager to set up their own business. You just need to make yourself aware of the various Government initiatives. And if you comply with the eligibility criteria, Government grants as a funding option could be one of the best.

### Microloans
- There are many private companies and non-profits that offer small loans, up to $35,000, carrying interest rates between 8% and 13%, and term lengths not to exceed six years. Traditional funding with these desirable rates and terms are rarely, if ever, available to brand-new businesses.

### Peer-to-peer lending.
- It is a loan not from a financial institution but from individuals who want to financially support an idea that they think can be successful. Often, the investor in this case is a successful entrepreneur who supports new ideas similar to his idea.

### Invoice factoring
- Invoice financing is a way for businesses to borrow money against the amounts due from customers. Invoice financing helps businesses improve cash flow. Businesses pay a percentage of the invoice amount to the lender as a fee for borrowing the money.

### Equipment financing.
- Equipment financing. A lender lends money to a customer to purchase business-related equipment. This debt is repaid later in installments with interest. Lenders usually require a lien on the equipment. Pledged equipment makes it easier to get a loan even if you are in business for a short time.

There is many ways of financing that entrepreneurs can take into consideration during setting up their business. All of the mentioned ways require lots of consideration. The important thing is to go with a funding option with which you are comfortable and confident so that you can focus on turning your business idea into a success.

IMPOSSIBLE FOODS AS AN ORGANIZATION OF TOMORROW

WHAT IS IMPOSSIBLE FOODS11?

- Company on a mission to restore biodiversity and transform food system by making meat, fish and dairy from plants
- Founded in 2011 by Dr. Patrick B. Brown with headquarters in California, USA
- Currently available in USA, Hong Kong, Macau and Singapore

WHAT IS A START-UP?

It is hard to say what exactly concept start-up means, however there are some specifications which characterized this topic. Originally start-ups are all new entities. They are coming into the market in hopes that their development will increase innovativeness and also step on economic development. Start-ups associate with conducting businesses in its initial phase and also with implementing innovations. These innovative entrepreneurs can be distinguished by their unique abilities11.

WHAT IS THE ORGANIZATION OF TOMORROW ON THE EXAMPLE OF START-UP

The changing world does not let organizations rest so they must come to terms with the inevitable need for change. Based on the analysis, future organizations would need to invest more in human capital, take serious measures to reduce the negative impact on the environment as well as constantly search new ways to improve in other areas such as technology. But who could know for sure, what the future holds?

The organization of tomorrow will, in some way, share the characteristics of a learning organization. Its features7:
- Creating and collecting knowledge
- Energy and effort
- Space for improvement (conscious improvement)
- Employees responsibility for their own, personal development
- Searching new solutions and learning how to find them
- Shaping the environment
- Permanent capacity building
- Innovations

ASSUMPTIONS4

- Transferring own value system
- Appropriate purpose employees qualifications
- Widening of knowledge
- Pushing the limits
- Activation in the sphere of social life
- Employee motivation and commitment
- Creating space for the change and learning

FUTURE ORGANIZATION

The organization of tomorrow is a term that can only be discussed and defined by today’s standards. Those who try to capture the meaning of it, bring up the need to invest in human capital, natural environment and caring for the society’s well-being as a foundation1. Organization of tomorrow will have to not only satisfy its clients in terms of quality services and products offered, but also function as an educational establishment for adults2. It should discover talents, improve skills of its employees, bring professional fulfillment and also care for its specific culture and standards3. It is believed that besides from new technologies and know-how, values of a company determine its identity.

INFORMATION CREATES SUCCESS

Knowledge will be the most important factor which can create competitive advantage2. The organization of tomorrow should be a data-based business. Of course, the key is how to competently use information. Thanks to that, the company can achieve goal (success). Having as much information as it is possible is not a good way. Selecting is the solution7.

DEVELOPMENT

It is undeniable that development is an inseparable element of every organization. What’s more, it is one of the most effective ways to shape the company. Not only does it create the spheres of company’s functioning, but also allows to compete effectively on the market. Thanks to that, it is possible to achieve new/better position9.

QUALITIES4

- Creating the value chain - common good of suppliers, customers
- Closeness to the client, listening to their needs, trust
- Flexible response to the changes
- Being capable of constant changes, searching new advantages
- Human capital as the most important asset
- Managers should coach others, not overuse power

WHAT IS A START-UP?

From startup to empire

The topic of our poster concerned about entrepreneurship issue. Our purpose is to introduce the problem of development among organizations. We also show some examples that building the empire begins from startups. From rags to riches is the best way to define the hard work of those companies.

Introduction

The key point of setting new startup is a brilliant idea. When entrepreneur has it, he or she can go for the main aim of every business which is development the idea and constant growth of a business. In long-term perspectives entrepreneurs try also to conquering new markets and broaden customer base by using management tools. As a result they become greater and they can share their innovative solutions. However to follow the aims above, the owner has to make the first step and implement the unique idea into practice and establish a new business. The best way that encourages such a would-be entrepreneur to take a risk is another business's success. As an example could be emphasize Google that was set up in garage and now is well-known company. Also Polish company Fibar Group which now provides its services in over a 100 countries around the world. The owner had showed that from rags to riches could be putting into practice. Originally he wanted to make his home smart but after that he created his own idea of smart house solution which achieved great success on the market.

Factors of startups’ success or failure

- **Financial** - undercapitalization at first stage of establishing a business could make it fail. Also lack of financial records could affect on mismanagement problems which is a waste. As a result the financial situation is not under control.

- **Experience issue** - entrepreneurs with business experience are more effective and acting more reasonable that is why they have higher chance for success. What is more leadership is more than only a vision. The leader sets the example for the rest of the organisation with appropriate attitude, ethic of work, and determination.

- **Planning** - this factor is one of the most important, managers or owners without having a plan or strategy for its business doesn't make it growth. All people committed to running the startup need to have in mind the core goals and being dedicated toward the achieving it. What is important the critical path of thrive must be updated during the business’s progress.

- **Professional advice** - it is significant not only for owners who have no experience of management or economical area but also for those who need IT advice or any other mentorship issue important for building an empire.

- **Product/service timing** - in achieving success it is important to monitors the product/service situation. Every product or services has its stage of development. Managers have to seeking for growth it and selecting those product or services which are at this stage. It assures the demand increase and makes business profitable.

- **Crew** - With regard to achieving the setted goals, entrepreneur needs to surround yourself with people who understand the business's vision and fit into its culture. The internal users need to be dedicated and highly motivated.

- **Protection of unique idea** - it is not possible not to talking about ideas, particularly if you hope to fundraising and developing your startup. At first step of building the business, before you will discuss an idea in public, it is worth to make a non-disclosure agreement that will protect entrepreneur’s intellectual property that is the most valuable assets of every business entity.

Successful Startups

- **Airbnb** - VALUATION $29,3 B
- **Uber** - VALUATION $12,3 B
- **Pinterest** - VALUATION $72 B

Selected failure factors

- Undercapitalization
- Crew issues
- Professional advice
- Planning
- Pricing/cost issues
- Ignoring customers

Conclusions

The business field is very demanding what shows the establish new entity process. Global brands such as Airbnb, Google or Uber shows that unique idea, determination and following advice is a recipe for success. Such factors mentioned above are based on success and failure of many enterprises that is why important to draw their experience to became success.

From startup to empire

J. Świerczek, K. Święciak, P. Waksmandzka
Human capital as a basis for building a competitive advantage

Gaining a competitive advantage in today’s economic reality is an extremely difficult task, because the determinant of competitiveness is not only the products and services offered by companies, but above all unique and specific knowledge. The importance of human capital is increasingly appreciated both in theory and in practice. Nowadays, it is more and more often emphasized that the true value of a company’s intangible assets is the knowledge and skills of its employees, customer satisfaction and product innovation.

**Human capital** represents the human factor in the organization; the combined intelligence, skills and expertise that gives the organization its distinctive character. The human elements of the organization are those that are capable of learning, changing, innovating and providing the creative thrust which if properly motivated can ensure the long-term survival of the organization.

In the recent years, terms like knowledge society, intelligent, learning or knowledge based organizations are used more often. Related to these concepts, many studies underline the fact that organizations should act intelligently by learning and using their knowledge or by being just knowledgebased organizations. More than 48 per cent of entrepreneurs believe that improving employees qualifications makes a company innovative. It is the employees focused on development that are the source of innovative solutions and creative ideas that distinguish the company from the competition.

**The advantages of investing in human capital**

- Increase in sales and profit
- Improve the rate of employee fluctuations
- Increase in employee satisfaction
- Increase in associate productivity
- Increase in loyalty
- Improve organizational communication
- Increase in motivation

**Human capital internal reporting**

Analysing and reporting human capital data to top management and line managers will lead to better informed decision making about what kind of actions or practices will improve business results, increased ability to recognize problems and take rapid action to deal with them, and the scope to demonstrate the effectiveness of HR solutions.

It is not enough simply to give managers and other stakeholders information on human capital. It must be accompanied by effective analysis and explanation if they are going to understand and act upon it in the interests of maximizing organizational performance.
Implement your own business idea in practice

There are no restrictions on who can turn into an incredible business visionary. You don’t really require an advanced education, a cluster of cash in the bank or even business experience to begin something that could turn into the following real achievement. Nonetheless, what you do require is a solid arrangement and the drive to see it through. There is a ton to consider and plan before you dispatch and it is vital to set yourself up for business. On the off chance that you believe you are prepared to begin your first business, here is a well ordered review of what you have to do to get it going.

10 steps to turn an idea into a business

→ Come up with an idea. Choose an idea that suits your passions, goals, strengths, resources and risk tolerance. However, that your initial idea is just a hypothesis.

→ Think through all angles. Assess the opportunity as an investor would do it in an objective, accurate and analytical way. Who are the customers and what do they need? How big is the chance? Is the withdrawal worth the risk? What is the business model? A rough business plan is a great way to make sure you cover all of your bases.

→ Get feedback. Find people who know the market, business model, competitors and predecessors - the people who were there have done it and can help you understand what works and what does not in the real world. Also, talk to customers - people from the main target market - and find out what they think about your hypothesis.

→ Respond to feedback. Make the necessary changes to your business plan, product and marketing strategy. Run a few numbers to find out how much capital you need to reach key milestones. Develop an implementation plan with the most important goals over the next few months and specify who you need in the team to implement this plan.

→ Build a basic product. When you imagine a product or service that you ultimately want to offer, it probably has a neat appearance and a full set of features. Keep this final vision of the rear burner for now. Build this basic product as quickly and inexpensively as possible.

→ Open shop. The temptation is to wait until your product is “perfect” to start selling it. Instead, realize that “perfect is a good enough enemy.” Create a basic product and quickly introduce it to the market.

→ Test what you’ve created. Thanks to products on the market, you can learn how to tailor your offer to customer needs. To do this, test items such as prices, brand, features and customer experience. Measure the results and draw conclusions.

→ Make adjustments. When you find out which aspects of the product and marketing you have made a mistake, of course you want to fix them. But I hope that some things will also improve and you will want to leave them untouched.

→ Get ready to grow. Check your business plan again and update your product, team, marketing, implementation and finance strategies. Gather the resources that you need to develop. If you are going to raise capital, this is a good time.

→ Stomp on the start-up accelerator. Thanks to the market-proven plan and resources, it’s time to grow. Make sure your team knows and believes where you are going. Make sure everyone understands what they expect and what they need.

The risk of changing your life completely in favor of trying something we’ve always wanted to do and making it your job is undoubtedly worth crossing your own limits. The more that it can provide security for the rest of life at the price of temporary (sometimes shorter, sometimes longer) turbulence. Once you get started, never rest on your laurels. Live change, enjoy it, experiment. Improve yourself, your idea, your business. Your enterprise should develop throughout its duration - just like you want to develop throughout your life. Remember this and everything will go according to plan - you will become your own hero.
Use of controlling techniques in verifying contractors’ credibility

Urszula Wojtas, Bartłomiej Żurak
Accounting and Controlling, Cracow University of Economics

Introduction

Credibility of contractors is of crucial importance for the processes of business management. It is not only a problem of management board of huge corporations, but also small business entities. Financially unstable contractors are a tremendous problem for entrepreneurs - in addition to the lack of payment for goods or services, the entrepreneur loses because of inevitability to pay taxes for these products. That is why it is worth spending time assessing credibility of the contractor before establishing cooperation. Counterparty verification is not only recommended before entering into the first business transaction, but should also be a continuous process. This will protect the company from dishonest contractors and minimize the risk of losing receivables.

Payment gridlocks

Maintaining the appropriate level of financial liquidity is a key problem faced by today’s enterprises. A financial crisis is a financial situation characterized by a lack of cash or easily-convertible-to-cash assets on hand across many businesses what is identify as a case of insolvency. Such situations could generate late payments or even payment gridlocks which not only lead to bankruptcy of the company itself, but also the impact on financial problems of other entities.

A very effective way to check a contractor is business intelligence. Companies check the potential business partner in official registers which are free and publicly available. The National Court Register (Kronowy Rejestr Sądowy) provides information on the legal status of a registered entity and the material elements of its financial condition. The Central Registration and Information on Businesses (Centrala Ewidencji / Informacji o Zakończonych Gospodarczce) contains information about entrepreneurs conducting business activity in Poland. At the white list companies check the status of the contractor relevant for liability for VAT obligations. Thanks to financial statements contractor can be assessed in financial terms.

Sources of information about business partners

Data obtained from these sources are the basis for in-depth contractor analyses, but are also used to contractor verification with the 5C method. It is an expert method based on the knowledge of credit inspectors (analysts), based on decision criteria. It belongs to the group of quantitative and qualitative methods, because analyzing hard financial indicators is supplemented with expert judgment. The graph below shows 5C method elements.

Tools of assessing credibility

Huge risk while running a business is undoubtedly the loss of receivables due to insolvency or dishonesty of the contractor. Deferred payments used in companies have many benefits, however, they can cause payment gridlocks when the contractor is not able to regulate payments. To avoid cooperation with an insolvent contractor, specialist perform the credibility check. Entrepreneurs have many resources at their disposal to verify credibility of the contractor. Thanks to described methods of searching for information about contractors, analysts can check legal status, debts, financial condition or the condition of the company. In addition to analysts, modern technologies are also helpful in checking the contractor. Thanks to the automation and robotization of processes, companies can find information about contractors much more efficiently. These improvements give the opportunity to verify partners more often, and thus better protection against loss of money. In conclusion checking of business partners should be carried out regularly. There are many methods and tools helpful in this activity, which means that with little effort we can protect the company against loss of receivables.
Driving a stable startup in an unstable economic situation

M. Wójcik, S. Wójcik

ABSTRACT

The following research deals with issues related to the well current topic, which is the spread of coronavirus in the world and the impact of this factor on the working of startups.

INTRODUCTION

We live in times of constant changes caused by a vast number of factors, such as the development of new technologies, new opportunities, new regulations, etc. In such a situation, it is even harder to find an accurate and detailed forecast. Sometimes, despite wide knowledge in a given field, one cannot be extremely sure whether the pandemic together with the economic troubles will be well recovered and more with little damage. Sometimes, one scenario is significantly worse than the other. And this is the case of the global economy.

In this case, the factor which was initially thought to have insignificant impact on economic activity, namely the coronavirus pandemic, changed the economic environment of the world and even reduced its economic activity. As a result, it has contributed to the economic recession and increased risk in almost all sectors.

The coronavirus epidemic knocked out the market for young, innovative companies and their funds. But can the crisis also be a chance for success?

ANALYSIS AND CONCLUSIONS

The MoneyTree report for Q1 2020, performed by CB Insights and PwC, indicates the latest trends in the funding market and the environment of the economy.

Can a crisis for such companies also mean a chance for success?

As of March 31, 2020, according to the report, the number of startups increased to over 8 billion, with the United States maintaining its position as the world’s leader in startups. The report also highlights the transition from traditional sectors to sectors related to technology, health, and finance.

Driving a stable startup in an unstable economic situation

M. Wójcik, S. Wójcik
Scale up as an opportunity for startups

Wojnar Katarzyna, Patrycja Wójcik

Introduction

Scale up is a special program created by the government. Its purpose is to support startups by facilitating their cooperation with large corporations. This action helps in the development and financing of new companies, and at the same time allows the implementation and design of innovative solutions in corporations. The duration of the above-presented project is about six months.

Here are some of the most known corporations that have participated in previous editions:

- Tauron Polska Energia S.A.
- Grupa Azoty Energia S.A.
- ES – System S.A.
- Astor
- Grupa Maspex Sp. z o. o. Sp. k.
- Bank Spółdzielczy w Toruniu
- Polimer Sp. z o. o.

This program does not require startups to have their own contribution, and even, mostly, offers financial support in the amount of PLN 200,000.

The main industries that can participate in the Scale Up program are:

LOGISTICS

IIOT/AR

FINTECH

FOODTECH

BIOTECHNOLOGY

Results of previous editions

<table>
<thead>
<tr>
<th>Edition</th>

</tbody>
</table>

To apply to the program, each of the interested startups should:

STEP 1
- Complete the application form

STEP 2
- Project presentation

STEP 3
- Receipt of project financing up to PLN 200,000

STEP 4
- If necessary, use expert advice

STEP 5
- Start working on implementing the project

Conclusion

To sum up, the Scale Up program significantly facilitates the development and maintenance of startups on the market. The requirements necessary for the application are not excessive, it is enough to be a young, innovative company operating in the indicated industries. Profits that can be achieved through participation in the program are not only financial support, but also knowledge, experience, business contacts, as well as access to the technological resources of large enterprises. The results of previous editions show that the number of startups registered to participate in the program is high, but only 61/62 enterprises go to the second stage, and 23 units are finally selected to take part in the Scale Up program. Statistics show that this program has helped 10.5% startups to attract investors immediately after implementation, so they have an almost immediate guarantee for financial support also after the program. 31.5% of startups acquire customers immediately after implementation, so they do not have to worry about the nearest future of the company, because the number of clients will increase, which gives more and more opportunities for development and staying on the market. 24% of companies participating in the program also obtained additional funds for their activities, thanks to which they could afford to buy the latest equipment and develop the unit.

FROM FUN TO SUCCESS - the forming of enterprising behavior among youth

Joanna Spyrka, Klaudia Stach, Dominika Świerczek

Internships with the Lion from ING

Internships with the Lion is the program intended for students, which are a full of passion and which can efficiently operate new technology. This is created especially for young, apt people, wanting take an initiative, act effectively and help the others people to achieve success. Leaders will convey theory, which is essential, but what is more important they uncover before the students the secrets about professional practice.

Job Fairs

The Job Fairs are mainly intended for students and graduates of universities. This is a form of meeting employers with potential job candidates. Jobseekers can compare offers available on the market, and companies can find young and creative candidates in informal conditions. They support application documents and suggest what behaviors to avoid during interviews and which rules to follow.

Entrepreneurship Day

An annual program organised by Young Entrepreneurship Foundation is destined by schools and entrepreneurs. The program give an possibility to hold a one day visit in chosen by students company. That wishes to be familiar with the business organisation and management. Entrepreneurship Day conduct to make an accurate decisions in planning further education and career path.

The Teens’s Mini-Enterprise

The Teens’s Mini-Enterprise is the program of managing the company, which is realised on the basis computer simulation of economy processes by using JA TITAN software. The program is destined to students high schools. Thanks to this game, the have possibility to make sure about necessity poses theory knowledge in relevandy make a business decisions which lead the team to victoria in this feigned competition.

The School Stock Market Game

The School Stock Market Game is a contest. The main aim is economic education in the field of capital market and stock market mechanisms. This game is the basis of investing, tracking stock quotes, making investment decisions and making transactions. This is a preparation for investing real money in the future.

The Simulation Company

The Simulation Company is an innovative tool that reflects the functioning of a virtual company while maintaining the real conditions of the business entity. The game contributes to the development of key competences in four areas: entrepreneurial, communication in English (the game also has an English version), mathematical and IT competences.

Maspex Summer Internship Program

Summer Internship Program in the Maspex Company assumes that the students during practice learn as much as possible about work in the FMCG industry. These take place in diverse departments of company and give the opportunities to stay longer in the Maspex Company. The company offers also trainings and language courses during the practice.

The Academy of Managerial Education - educational cafeteria for high school students

This is an e-learning project organized by the National Bank of Poland in cooperation with the Warsaw School of Economics. During the event, students have the opportunity to participate in many educational events conducted in the form of online, such as e-learning lectures, discussion forums, competitions, as well as online business consulting. Participants earn points for participating in the program, and those who show the greatest activity and commitment win prizes.

The forming of entrepreneurial attitudes has been taking place from an early age. There are many tools that support entrepreneurial thinking, starting from platforms which learn youth to invest in shares listed on the Warsaw Stock Exchange. Moreover, many institutions like ING Bank offers development programs, for instance internships. Those actions are also aimed at strengthening self-confidence and own abilities, as well as supporting personal development. These conclusions were based on a survey conducted among Polish youth, and their detailed results were described in the text below.

We asked high school and college students whether they would like to open their own business in the future. The purpose of this study was to see how the projects described next to it affect the desire to take such an initiative.

The analysis was conducted among people who took part in these projects and who did not have contact with them. 70% of those who take participation in some of these projects would like to start their own business in the future what is displayed on the chart below.

Do you want to start your own business in the future?

| Yes | 30% |
| No  | 70% |

In turn, people who did not participate in them are interested only in 40% what is presented on the chart.

Do you want to start your own business in the future?

| Yes | 60% |
| No  | 40% |

This shows that educational projects have a positive impact on entrepreneurial attitudes among young people. These people have many ideas and can create interesting workplaces in the future. It also helps them to strengthen their confidence and growing their own abilities. What is more, thanks to this, young people improve the country’s economic development. The chart also shows that it is worth creating new projects in schools and at universities and encouraging teenagers to participate in it. The future depends on young people so it is necessary to help them develop.

To sum up, the described projects have a significant impact on the development of entrepreneurial behavior. This means that such attitudes can develop in us at an early stage of education. Such actions are not only learning, but also great fun. So, enjoy it!
THE MAIN CHALLENGES AND BENEFITS RESULTING FROM CONVERTING START-UP INTO A CORPORATION.

During moving from Start-up to Corporation, companies are facing many difficulties. Despite this, growth is the main goal of start-up. Without the convert, enterprise remains as a small business.

In Development Company should focus on:

- **People**
  - People are company’s foundation. It’s important to invest in recruitment process and trainings.

- **Execution**
  - Changing role of entrepreneur. Delegating tasks, goal setting and measuring effects.

- **Strategy**
  - In strategy, building process important is customer needs analysis and standing out from the competition.

- **Cash**
  - Liquidity management, reasonable spending money and estimating a risk.

Priorities over time:

- Financial liquidity, stabilization
- Refining processes, stabilizing
- Customers turnover
- Double taxation of the income
- Economies of scale
- More diversified revenue streams

Challenges that companies have to deal with:

- Being the visionary
- Coping with market competition
- Adapting to market transformations
- The founding team’s inefficiency leading to broke workflow
- Allocating marketing resources
- Motivating employees
- Dealing with the unknown
- Decision-making

Excessive tax filings
Set policies and procedures
Political clout
Difficulty in transferring ownership
More opportunities
Economies of scale
Double taxation of the income
Perceived employment stability

How to achieve success?

This poster will show you some tips on how to start up a business and after a few years become a boss of a huge company!

- Start up a small business that has just been started
- Hire well-prepared employees
- Take care of the good atmosphere in the company
- Don't forget about advertisement!

Investors are equally important

- You have to offer a better price than the other companies
- There is no company without suppliers!
- It's really important to acquire customers :)

- Time to issue shares!
- Who run the world? YOU!
- You can establish branches abroad :)
- Be patient and remember that hard work will pay off

Conclusion: Good idea is not the only factor that you need to achieve success. You also have to take care about your employees, suppliers and investors. Of course, you can’t forget about the money :) You have to work really hard and anything can happen!

How to achieve success?
K. Klimek, M. Broszkiewicz
Paradoxically, the current global situation related to the coronavirus epidemic is contributing to increased interest in startups, especially those operating in the medical industry.

It should be remembered that start up is an organization or a young innovative enterprise using modern technologies.

It is these types of companies that can play a key role in creating and introducing innovative solutions to ensure the safety of medical services but also patients.

The purpose of this article is to emphasize the importance of innovation in young enterprises, as well as to present examples of uniting startups with public organizations in the fight against the epidemic. Assistance and support programs for start-ups will be of great importance here.

Organizers of Techstars Startup Weekend organized the event Global Startup Weekend Poland Covid-19, as part of which startups could obtain support related to the process of implementing technologies on the market to facilitate work and functioning in a pandemic era.

As part of the Łódź Special Economic Zone in cooperation with Ericsson Polska, the Star Spark 2.0 accelerator for technologies related to combating the effects of COVID-19 has been launched. Start-ups interested in participating in this accelerator can count on mentoring and financial support as well as assistance in reaching clients. On the other hand The National Center for Research and Development has also launched its own grant program. The institution plans to select innovative projects related to diagnostics, prevention and treatment of COVID-19 as part of the Fast Path "Coronavirus". PLN 200 million has been earmarked for this purpose from European funds, which you can apply for from 6 May 2020.

Although the prevailing situation surprised everyone, it was necessary to implement the measures as soon as possible, and therefore the first effects of close cooperation between start-ups and the medical industry can already be observed. The BrainScan.ai team developed artificial intelligence specialized in computed tomography images for the diagnosis of COVID-19. Mudita, in turn, established cooperation with the Foundation for Research and Development of Science, under which a fan was designed for patients infected with the virus. The device is to enable the patient to supply oxygen in a crisis situation when the medical facility does not have a free respirator.

According to the head of the Crisis Information Center of the Space Research Center of the Polish Academy of Sciences, the goal of Covid Challenge is to generate innovations that can help health care in the fight against pandemics. It is primarily about protective equipment for paramedics, repeating based on 3D printing, elements of a simple improvement of ambulance equipment, but also solutions that remotely scan human temperature.

As you can see, openness to new solutions is not indifferent to public organizations, especially if the proposals offered are related to the most valuable good which is human life. However, is the innovation of Polish startups based on financing development?

An extremely important indicator of the level of innovation in the economy a country's percentage of GDP is allocated to research and development. From the analysis of data on total expenditure on research and development (GERD) published by Eurostat shows that developed and prosperous countries allocate the largest share of its research and development GDP. Poland is in this list unfortunately at the bottom of the rate.

Also research and development expenses per capita are the largest in developed countries. Expenditure on research and development per capita in Poland is 5 times smaller than the average for 28 EU countries.

Considerations regarding the growth of this indicator are comforting. Over the past decade expenditure in Poland increased almost fourfold, while the EU average recorded an increase of only one third.

(based on reports ExMefix Sp. z o.o. Przedsięwzięcia w fazie Start-UP oraz nakłady na badania i rozwój (R&D) – sytuacja w Polsce oraz na świecie)

It remains to be hoped that the intensive involvement of the startup industry will not be forgotten, but will translate into further assistance programs for young entrepreneurs, also in the context of legal conditions, although in this aspect some actions have already been taken - from March 2021 Prosta Spółka Akcyjna will be established, whose minimum capital needed to set up is only PLN 1.
A recipe for a unicorn: what do billion dollar startups have in common?

Authors: Brygida Mordarska, Sylwia Szrajber, Magdalena Wojsław

Introduction

The purpose of our work was to compare the general features of existing unicorn startups and to analyze which factors increase the chances of building a successful company. We were aiming to check if there is a set of general features that boosts the startup’s chances of becoming a unicorn.

What does the term unicorn mean? A unicorn startup is a privately held startup company that is worth more than 1 billion dollars. The term became popular a few years ago, it has been first coined in 2013 by Aileen Lee. The mythical animal was meant to represent the statistical rarity of such successful ventures. However, extremely successful startups are not as rare now as they used to be back in 2013.

One of the reasons behind the rapid growth of unicorns is adopting a fast-growing strategy called get big fast (GBF) strategy for startups. GBF is a strategy where a startup is focused on rapid development mostly by cutting prices. This procedure allows us to gain an advantage in market share.

To obtain unicorn status companies are using technological advancements. With the broad access to social media, startups have the ability to expand their business faster than ever. Also, many unicorns bolster their businesses by buying out technology and business models from large public companies rather than creating them themselves.

Some of the unicorn features include:• using modern technologies, especially Information and Communication Technologies (ICT),• short period of activity (usually up to 5 years),• searching for or having a repetitive, scaled and profitable business model,• operations in high-risk conditions,• the pursuit of rapid growth.

Methods

In this poster, our attention is focused on currently existing unicorn startups. We have compared them in terms of industry, geographic location, size of profit achieved. It has been analyzed whether on the basis of such basic and general features we are able to select the set of features that enhances startup chances to become a unicorn. Due to the space limitation presented charts are only a part of the analysis, we have mentioned some more details in conclusions. This work is created based on data from cbinsights.com. Available data has been developed, presented graphically and analyzed by our team.

Results

Conclusions

It was not a surprise that the majority of successful startups were established in either the USA or China. Statistics show that other countries that might offer a favorable environment for building a startup are UK (24 unicorns), Germany (12), India (10) and South Korea (12).

Most of the UK-based unicorns are in the fintech industry (10). UK is broadly known as one of the financial European capitals (London City), with its excellent educational base (LSE, Oxford, headquarters of CIMA and ACCA) and large experience in the banking sector it is undoubtedly a location worth considering when starting a financial company. There is no leading industry among German startups, Germany might be considered a safe environment in general due to a variety of startup acceleration programs (eg. German Accelerator) and a stable economy.

When looking at diagrams showing the count and valuation of unicorns by industry, there are four main leaders: AI, e-commerce, fintech, internet software and services. While the development of e-commerce was responsible for unicorns growth in 2014-2016, the rise observed in 2017-2019 was the era of IT and fintech. One of the possible reasons is that building a startup in those industries does not require any expensive infrastructure, it is mostly based on highly qualified human resources. There is always a risk involved in starting a new company. When it is not necessary to invest heavily in the beginning it makes people more eager to try. Another possible reason for the rise of IT unicorns started in 2017 is a fast development and growing demand for the robotic process automation and IoT solutions.

To sum up, there are features that enhance chances of building a successful startup: there are certain locations and industries that give better chances to succeed; it is also important to choose the right moment in time.
This presentation aims to compare and distinction between start-ups and corporation.

**Start-up**
- Characteristic features: innovation and uncertainty.
- Services or products must be innovative, revealing and hitherto unknown to the consumer.
- Hierarchy doesn’t exist, promotion is possible.
- Limited benefits.

**Corporation**
- There is a hierarchy and rigid rules and principles.
- Work stabilization.
- A wide package of benefits.

**In summary, start-ups and corporations, despite the fact that they are enterprises and their main goal is to grow and earn money, they differ. Their structure, philosophy and approach to the employee are radically different. This is due to the differences in their size. Start-ups offers the opportunity to perform tasks independently and creatively. Corporations operate according to specific schemes and rules while maintaining stability and pursuing the employee's goal.**
How do small company grow into a big company?

A. Wróbel, M. Wójcik, K. Podlasek

1. REACH YOUR CURRENT MARKET

The first factor that usually comes to mind when you hear about how to expand your business is reaching customers. But the consumers that you have already had are your safest bet to boost the profits. Getting more people who have already purchased from you to buy more is faster and more cost-effective than finding new buyers.

2. REQUEST FOR REFERRALS

The lure of new clients to your company is of course never a bad tactic. Some of the easiest ways to do that are to call for feedback from your existing customers. Tell the satisfied customer during or after each, work or transaction whether they meet anyone else who would be interested in your services or products.

3. ENTER THE MARKET BY INNOVATING YOUR PRODUCT OR SERVICE

Discovering and promoting new applications for your products or services is a perfect way to attract existing customers to purchase more and attract new customers.

4. WIDEN THE CONSUMER REACH

Opening stores in new locations. New locations can be interactive. Too, as an online store platform.

5. WIDEN THE MEDIA REACH

Expand your scope of publicity. Once you have established a new market, you may be able to advertise and reach the sector through select media. If you have a younger crowd in your new industry, you might want to use social networks for ads.

6. BEING PART OF TRADE EVENTS

Trade shows can also be a wonderful way to develop. As trade shows attract customers who are already involved in a particular product or service that you are providing. They will boost the bottom line dramatically.

7. CONTAIN YOUR EXPENSES & TRY OUT ONLINE LEAD GENERATION

There are two key cost-cutting methods. Trying to offload the “loser” goods and increasing your efficiency of production. Also, it’s the peak time to invest your marketing expenses into something which is really good, effective and very much economical.

8. MODERNIZE THE GOODS AND SERVICES

If you want to concentrate on your well-defined market’s relevant requirements by market segments with similar requirements and functionality, you need to concentrate more on the diversity that brings that urge in your clients to try out and reflect their opinions on your products.

9. EXPORTING

Broadening to global markets can provide a significant lift to the profit margin for your company. This is a way to grow the business that needs considerable time and money investment but can be highly rewarding.

CONCLUSION

To grow your business successfully you need to have a clear goal. Aside from the fact that you wanted to be a successful entrepreneur, give your time to think what is the purpose of your business. What do you hope to bring to the market? When you do find the answer, incorporate it into your vision and mission. Build a business system that will help you achieve that goal. Business systems are the science behind every successful enterprise. It is your roadmap to success that will get you to your intended success.
In order to present the path from startup to corporation, we propose to utilize Verne Harnish’s theory. It portrays the development of the company at its different stages using references to animals. The theory also determines four areas of focus for the management.

**People**: the organization is created by people. You need to invest in recruitment and recruit the best specialists regardless of the price. Investing in employees is equally important.

**Strategy**: should be simple. It is important to include SWOT analysis, industry average, company mission and values, goals and market analysis. You should know what makes the company stand out and what it provides to its clients.

**Execution**: presents the leader as a person who runs the company and people should not get him involved in their daily duties. Thanks to this, he can look at the business and future of the company from a broad perspective. The responsibilities of the leader include building relationships, market research, interaction with customers and designing new products.

**Cash**: the company cannot stand without it. The company should avoid unnecessary expenses and have savings, preferably for a minimum of 2 months in which it would not generate much revenue. It is also important to collect payments from customers as soon as possible and that each purchase is thought out.

The most important conclusion is that to be successful in the long journey from startup to corporation, startups must be very consistent and determined taking care of the 4 aspects: people, strategy, execution and cash. This path is not easy, but the possible prize is worth the effort.

Also, as illustrated below, the owner has to accept the fact that, at some point during that journey, he will have to step back from being the part of the company’s daily operations.

Most companies start as small and remain so. However, some startups - “mice” - grow rapidly and ultimately achieve great success.

“Elephants” are the largest companies - corporations. Finally, some gazelles join this group.

A small part of mice becomes the so-called “gazelles”. Becoming a gazelle should be a priority for every mouse. It is a phase of rapid growth.

**Characteristics of business-owner relation at each stage of startup development.**

*A Orange planet represents the owner

From startup to... corporation?

A. Strzelecka, O. Kamińska, A. Majcher
FROM START-UP TO CORPORATION – HOW TO DEVELOP YOUR ENTERPRISE?

START-UP CHARACTERISTICS:
- ENTITY CONDUCTING BUSINESS ACTIVITY
- INDEPENDENCE
- INNOVATION
- SOLUTION TO AN EXISTING PROBLEM
- UNCERTAINTY
- RISK RELATED TO THE NEW MARKET

CORPORATE CHARACTERISTICS:
- VERY LARGE COMPANY OPERATING ON THE GLOBAL MARKET
- EMPLOYING A LARGE NUMBER OF EMPLOYEES
- USUALLY HAS LEGAL PERSONALITY
- THE CORPORATION EARNs A LOT OF INCOME
- PRODUCTS ARE MUCH ADVERTISED AND KNOWN ON THE MARKET
- CONTROLS THE MARKET IN WHICH IT OPERATES
- ADVANCED TECHNOLOGY
- MODERN PRODUCTS
- WELL-ORGANIZED STRUCTURES

MOTIVATION
EVERYONE WHO SETS UP A COMPANY MUST BE MOTIVATED TO ACT. DREAMS OF DEVELOPMENT, BIG MONEY AND BREAKING THE MONOTONY ARE NOT ENOUGH! DO YOU WANT TO ACHIEVE SOMETHING? DO SOMETHING! EVEN IF YOU DON’T BELIEVE YOU WILL SUCCEED OR OTHERS TELL YOU THE SAME THING, MOTIVATION WILL HELP TO COMBINE PASSION WITH BUSINESS.

BUSINESS IDEA
THE FIRST RULE OF SUCCESS IS TO DO WHAT YOU LIKE! WITHOUT IT YOU HAVE NO CHANCE TO ACHIEVE DEVELOPMENT. THINK: DOES THE BUSINESS FOR WHICH YOU HAVE AN IDEA OCCUR WHERE YOU WANT TO RUN IT? YES? SO THE QUESTION IS: WILL YOU DO IT BETTER? BUSINESS MUST BE IN LINE WITH CUSTOMER NEEDS, SHOULD ATTRACT INTEREST.

BUSINESS FINANCING
WHEN YOU STOP BEING A DREAMER AND BECOME AN ENTREPRENEUR YOU HAVE TO THINK ABOUT HOW TO FINANCE YOUR BUSINESS. AFTER STARTING A BUSINESS, YOU MUST MAINTAIN IT. THE BUSINESS CAN BE FINANCED BY SAVINGS, LOANS, INVESTORS OR SUBSIDIES.

LAW
ALL BUSINESS ACTIVITIES MUST BE CONDUCTED IN ACCORDANCE WITH THE LAW. YOU MUST CHOOSE ONE OF THE LEGAL FORMS.

DEVELOPMENT
THE NEED FOR DEVELOPMENT IS VERY IMPORTANT TO STAY ON THE MARKET. THE GOAL OF DEVELOPMENT IS TO INCREASE THE QUALITY OF SERVICES OFFERED BY THE COMPANY. YOU HAVE TO GO WITH THE TIMES. CUSTOMER NEEDS ARE CONSTANTLY CHANGING. YOU NEED TO OUTSOURCE OR HIRE CO-WORKERS.

MARKETING
MARKETING IS THE ONLY CHANCE TO EARN MONEY. AFTER STARTING A BUSINESS, ONLY YOU KNOW ABOUT IT. NOWADAYS, FACEBOOK, INSTAGRAM, TWITTER IS THE KEY TO SUCCESS! BEFORE YOU INVEST IN BUSINESS, THINK ABOUT ITS ADVERTISING.

HUMAN RESOURCES
ONE OF THE MOST IMPORTANT THINGS WHEN STARTING A BUSINESS IS TO CREATE A TEAM. IT WOULD BE HARD TO DO IT ALONE. IT IS IMPORTANT THAT TEAM MEMBERS ARE CAREFULLY SELECTED. PEOPLE MUST BE LOYAL AND HELPFUL. YOU MUST BE SURE THEY ARE TRUSTWORTHY. SOMETIMES YOU NEED TO OUTSOURCE OR HIRE CO-WORKERS.

AS YOU CAN SEE, STARTING YOUR OWN BUSINESS INVOLVES MANY STAGES. SOME OF THESE STAGES ARE EASY FOR INNOVATORS TO ACHIEVE. UNFORTUNATELY, IN MANY CASES, YOU NEED TO SEEK OUTSIDE HELP TO DEVELOP YOUR WINGS. A CAREER IN A LARGE CORPORATION COMBINES MANY ADVANTAGES. THE MOST IMPORTANT OF THESE IS THE OPPORTUNITY FOR DEVELOPMENT. CORPORATIONS OFTEN OPEN THE DOOR TO TRAINEES BY CREATING INTERNSHIP PROGRAMS, WHICH IS RARE IN START-UPS. THIS, THE CORPORATION ALLOWS. IN START-UPS, YOU DECIDED ABOUT HOW YOUR JOB LOOKS LIKE. IN START-UPS, A FRIENDLY OFFICE ENCOURAGES YOU TO WORK EVERY DAY, SPECIALIY SINCE IT IS DESIGNED ACCORDING TO OUR OWN RULES, NOT A VISION IMPOSED FROM THE HEADQUARTERS OF A COMPANY LOCATED AT THE USING THE KNOWLEDGE GAINED IN COLLEGE IN PRACTICE OTHER END OF EUROPE OR THE WORLD.

From start-up to corporation – how to develop your enterprise
B. Rojek, A. Kurbiel, S. Jurkowska
A start-up is an enterprise or project whose primary goal is to launch an innovative product or service on the market. Its characteristic features are the lack of a specific business model and managing the business in conditions of extreme uncertainty.

The start-up term is usually used in the technology or IT industry. The main areas of activity of start-ups are:
- IT
- e-commerce
- mobile applications

Launching a start-up is associated with significant risk and the possibility of failure. It is mainly related to seeking and developing an effective business model and the uncertainty that the actions taken will not meet specific market needs.

Main differences between start-up and corporation

<table>
<thead>
<tr>
<th>Start-up</th>
<th>Corporation</th>
</tr>
</thead>
<tbody>
<tr>
<td>No hierarchy, quick promotion possibilities</td>
<td>The hierarchy and organizational structure are rigid</td>
</tr>
<tr>
<td>Variable situation related to building the start-up position on the market</td>
<td>Work stabilization</td>
</tr>
<tr>
<td>Quite limited and unusual benefits</td>
<td>Larger benefit packages</td>
</tr>
<tr>
<td>High independence related to broadening knowledge and acquiring new skills</td>
<td>Less independence</td>
</tr>
</tbody>
</table>

Taking all those factors into consideration, start-up and corporation are different forms of enterprise which vary in a significant way. Due to its flexible and non-hierarchical structure, start-up may be better form of business for creative people who need to launch an innovative or a completely new product or service. It is at high risk of failure, though. Corporation, on the other hand, would be a better form for businesses with a developed position on the market and for professionals who prefer stabilization and specific career path.
New technologies make the current model of functioning of global corporations inefficient and not very competitive. In the face of breakthrough innovations that change existing ones and create new markets, corporations are beginning to open themselves to cooperation with new entities. Under the concept of open innovations, large companies are increasingly looking towards young technology startups.

**CONCLUSION**

In the modern world, efficiency is not enough to be a leading entrepreneur on the market. Corporations are increasingly aware that only by investing in innovation are they able to maintain a strong position of the company and meet the expectations of customers. In the modern world, efficiency is not enough to be a leading entrepreneur on the market. Corporations are increasingly aware that only by investing in innovation are they able to maintain a strong position of the company and meet the expectations of customers.

**STARTUP**

New enterprises that start operating on the market have problems staying on this market. This is due to a lack of confidence in the new brand and new product, and thus insufficient cash for further development. Innovative solutions proposed by start-ups usually carry a significant risk that a beginner may not be able to handle it. Thanks to cooperation with corporations, startups have a greater chance of success, because they gain the market for their products and services, technological knowledge, which results in business growth and financial benefits.

**CORPORATION**

Corporations recognize that innovation is important to their business because they can conquer new markets. The fresh approach of startups to competition and operations in various markets helps corporations stay in a dynamically developing environment where traditional models are not able to fully adapt. While the new dynamic entity enters the corporate structure, ideas, styles of operation, and work organization, as well as approaches to processes, are confronted. This teaches corporate employees to differently think and look at challenges.

Authors: Izabela Szmalec, Kinga Więcek, Michał Urbanek
It's an organization created to seek a repeatable and scalable business model.

WHAT IS A STARTUP?

Startup should be formulated in such a way as to enable the conquest of new markets and to guarantee the development of the unit in accordance with the assumptions of the business model and plans of owners or investors.

FEATURS

Hyper Poland is a startup that is to build the Polish Hyperloop. Magnetic railway system that is to develop the speed of sound in special tunnels. Hyperloop is supposed to enable travel, e.g. from Krakow to Gdansk in 35 minutes. The goal is to develop speeds in excess of 1000 km/h.

Przemysław Paczek is the President of Hyper Poland.

EXAMPLE OF A STARTUP

CONCLUSION

If the company has a good idea and is able to implement appropriate actions, it is able to achieve success. Over time, it can expand its reach, thanks to which it can transform a startup into a corporation.

A corporation is a stable, profit-oriented organization. It can have a major impact on society. Many of the current corporations could initially be called startups e.g. Facebook.

CORPORATION AND STARTUP - DIFFERENCES

Startup is a young company that offers an innovate product or service. Its aim is to popularize a certain idea and to become a larger company.

Hyper Poland

Kacper Chmarzyński
Is every company a start-up?

Poster authors want to present the idea and characteristic features for organization in early stage of development called start-up. The article is about giving a definition and fundamental differences between start-up and all others newly created companies in business terms.

Where to look for the essence of start-up functioning?

The keyword in considerations is Latin *innovatio* that means renewal or change. Implementing change in real life is associated with benefiting and improving social or economic life solutions. Precursor introducing the concept of innovation theory in business field became an Austrian economist Joseph Schumpeter, while researching how technical innovations impact on the economy. Schumpeter presents the possibility of achieving a competitive position and creating a new trend on a given market, by implementing innovations in products, production methods and used technology, researching new markets and new organization of ongoing processes. Theorician assumptions show that the entrepreneur - innovator is exposed to imitation by the competition by making changes and that will result in dissemination of solutions with simultaneous economic growth of the whole environment. Imitation in this case has a positive effect on economic growth and knowledge commercialization. The transformation of the entire market forces him to look for solutions and new research to improve existing process.

Start-up characteristics

The start-up term from English has not yet had its equivalent in Polish, but the sense of the word is a relatively young company without a stable and shaped business model. Characteristic features indicating the possibility of being defined as start-up are:

- no specific and stable business model,
- early stage of development,
- Using innovations with high growth potential in a short time.

Other definitions also indicate a temporary organizations seeking its own business path while working in extreme uncertainty conditions. Start-ups can be characterized by their lack of operations history, low or no income, dependence of the entity superior financing the project or high failure risk (44% start-ups falls within 3 years). You should also pay attention to the generated losses that are associated with investments and customer acquisition attempts in initial phase.

Importance for the economy

By constituting only a small percentage for the entire economy, start-ups exert an unbelievably high influence on its development. Research conducted in the United States shows that 2/3 new workplaces are start-up offers. A similar case is related to the introduced innovations where companies in the early stages of development became prototypes for changes in global corporations often subsequently being bought out to form a department in larger unit. The largest increase is recorded in countries where the percentage of creating new companies based on technology development is highest. Market trends show that enterprises that are in the early stages development have a better chance of introducing radical changes and pointing to new market development directions than well established entities. It is caused by their tendency to risk, taking in cases with small possible losses. On a global wave start-up trend, from countries outside the USA, Israel is doing the best, while having the most listed companies on the US stock market.

Bibliography:

*K. Łuczač, „Rachunkowość innowacji na przykładzie przedsiębiorstw określanych mianem star-up”, Zeszyty Naukowe Uniwersytetu Szczecińskiego, Szczecin 2014*

Is every company a start-up?

M. Fudala, Ł. Gil, W. Chudzik
The goal of startups is to gain a new market for their products and achieve global success at a fast pace with low financial outlays.

GLOV is a company that sells innovative makeup removal products and home SPA products. Today, GLOV is a globally recognized brand and it all began as with any real startup in the founder's homes.

Booksy is a website for booking services in the health & beauty sector. The application can be downloaded directly to the phone or visit the Booksy website.

The purpose of the poster is to explain what startup is and what goals it has and show that Polish startups, guided by innovative thinking, have gained popularity around the world. They have long since left the startup phase, but they maintain their assumptions, it means they think innovatively. Both Glov and Booksy have built an innovative brand. Thanks to this, they are getting bigger every year and can be called corporations.

A startup is a young company founded by one or more entrepreneurs to develop a unique product or service and bring it to market.

To sum up, Polish startups are doing very well. They bring together clients from all over the world and are constantly developing. Therefore, they more and more produce goods and create more jobs.
Start-up

COMPANY DEVELOPMENT STAGE

With the help of the poster we want to show how a start-up can positively affect a company during its operation. It can be a stage that will bring a lot of good for the company. One of the main reasons why you should start your own startup is that you do not need to have large financial outlays. All you need is a good idea development, finding a way to present it well, and knowing where and how to look for financial support.

Definition of Start-up

Start-up is a temporary organization in the early stages of the life cycle, "created to look for a repetitive and scalable business model." Scalability here means a relatively proportional increase in market share, and thus a multiplication of cash invested by VC funds or Business Angels.

One of the main advantages of a start-up is the low entry threshold - in most cases setting up such an activity does not require any initial capital. It also means that anyone can start a new business model, regardless of experience or amount of accumulated capital.

FACTORS TO START A STARTUP

Startup Idea
Product Market-Fit
Startup Team
Networking
Competitor Analysis
Managing Funds
Build MVP
Market Analysis

Features of a start-up enterprise
- low costs start of business
- increased risk than standard ventures
- increased return on investment compared to standard ventures

In our opinion, start-up is the perfect solution for people who decide to start a career in the business world. Establishing this type of company does not require any initial capital. We think it is a perfect solution for young people who have a business idea but do not have the resources. Just remember that your determination and the right approach are the key factors for a successful startup. It is better to try to fail than not to try at all.

Many successful entrepreneurs have failed and that's how they came across the recipe for success.

Start-up. Company development stage
A. Kędzior, M. Oleksińska, M. Dopnik
STARTUP vs CORPORATE
WHAT IS BETTER FOR A JOB SEEKER?

WHAT’S THE DIFFERENCE?
Simply put, a startup is a relatively young company that offers an innovative product or service. Often, its goal is to promote a certain idea, value and transformation into a larger company. A corporation is a more stable, profit-oriented organization. Its range and scope of activities can have a great impact on society. In fact, many of the current corporations could initially be called startups. For example, Facebook started with an innovative idea related to social media and gradually transformed into the now known giant.

LEVEL OF INDEPENDENCE
In the corporation, there are separate departments with specialists to solve specific problems. In turn, in a startup, any problem can be an opportunity for you to show your creativity and add something from yourself.

PROS&CONS of Startups
+ Casual environment
+ Career progression
+ Trendy offices
+ Easier to stand out
+ Opportunity to work alongside senior leaders
- Less financial security
- Smaller budgets
- Often longer hours

PROS&CONS of Corporation
+ Large budgets
+ Higher salary
+ Central offices
+ 8-hour work hours
+ Company stability
+ Experienced leaders
- Formal work attire
- Serious work environment
- Slower career progression
- Less autonomy in making decisions
- Less exposure to senior leaders

YOUR RESPONSIBILITIES
In a corporation, a given position performs the same activities for years. A major change only takes place after promotion. In turn, in a startup, responsibilities can change even several times a year. In a short time you will have to deal with something that at the beginning of your work you did not have to deal with at all. This requires more flexibility but gives interesting opportunities to develop a variety of skills.

APPROACH TO EMPLOYEE MANAGEMENT
Startups usually offer a more relaxed atmosphere, where each employee is treated on a very friendly footing. On the other hand, everyone is busy with themselves and their projects. In turn, the corporate position has specific requirements, but supervisors spend more time training new employees.

HAVE YOU DECIDED?
Both startups and corporations have many advantages when it comes to choose your career path. It seems the better option for a young soul is to work at a startup. As you are not just a „number”, you can stand out with creativity and have impact on the company and its projects with your ideas. Thanks to casual environment, it is easier for young people to find themselves at the office. When the person who is looking for a job is matured, experienced and wants stability, the better option is to choose corporation. Working on high-end projects in stable company allows you to better use your experience and potential.

Startup vs Corporate. What is better for a job seeker?
A. Marzec, K. Nawara, K. Morga
The aim of the poster is the presentation of the transition from startup to corporation.

Conclusion: It takes a lot of self-discipline to transform a startup into a corporation. It is the good idea and continuous striving for further development of the business that can turn a small company into corporation some day.

Mission – Vision – Strategy

Lean Startup

Scale Up

Idea ➔ Startup ➔ Growth and Established ➔ Expansion and Mature

Business starts with the idea. At this point, ask yourself two questions: “What problem am I able to solve?” and “Does my proposed solution solve it effectively?” Are your answers clear? Perfect! Now it is time to start testing your idea.

The business is already born and now exists legally. Services or products are in production. The main challenge is to not go bankrupt through little cash. Focus on establishing a customer base, concentrate on market presence, and conserving cash flow.

Customers and revenues are increasing with many new opportunities and issues. Effective management and a new business plan are now your priorities. The company has loyal customers and startup life has become more routine. Stay focused on the bigger view! You work hard but the marketplace is competitive. Concentrate on improvement and productivity. To compete in an established market, you will require better business practices along with outsourcing and automation to improve productivity. It is time to hire specialists for each channel and give them the resources necessary to execute.

Extremely successful growth allows startups to become corporations. This leads to a new period of growth, new markets, and distribution channels. This is definitely your choice. Do you want to gain a larger market share and find new revenue and profit channels? Never forget about your existing experience and capabilities, the business should be based on what you really know. Growth is never done, but sales and profits have to be stable. However, competition remains fierce. Add new products or services to existing markets or expand existing startup into new markets and customer types. Find business partners and Investors. Consult with your accountant and financial advisors for the best tax strategy. Have you realized that the startup is now a corporation?

As long as you do not reach the product-market-fit, change the idea!

The Business Model Canvas as a strategic tool for designing innovative business models – the case of Airbnb Inc.

Karolina Sołtysik

Introduction

Although there is no universal definition of business model innovation, almost all researchers and practitioners agree that the focus on business model innovation has increased dramatically over the last couple of years. A unique business model is nowadays a source of competitive advantage and companies that aim to monopolize their industries should place a premium on finding a novel way of conducting a business – sometimes by simply changing one of the components of traditional business model. This is the first step in the disruption process.

The definition and importance of a business model

The term ‘business model’ has become prominent in recent years and led to a lot of publications. Many authors try to understand this concept by defining two underlying terms: ‘business’ and ‘model’. Business can be described as a set of activities performed by an entity in order to deliver value to customers – they all involve financial, commercial and industrial aspects and the main goal of any business is to make a profit. Model, on the other hand, is a systematic description of a process that shares its important characteristics. Therefore, by putting these elements together, business model can be defined as ‘a conceptual tool containing a set of objects, concepts and their relationships with the objective to express the business logic of a specific firm’ (Osterwalder, Pigneur & Tucci, 2005, p. 3). Today’s global business environment has created a dynamic business context, where most businesses are compelled to learn how to use their business models as a tool to gain competitive advantage over international competitors. Therefore, discussing capabilities and strategies through business model innovation has increased dramatically over the last couple of years. A unique business model is nowadays a source of a sustainable competitive advantage and companies that aim to succeed in the global market potential and owes its great success to its innovative business model.

An overview of Airbnb

Airbnb describes itself as ‘a trusted community marketplace for people to list, discover and book unique accommodations around the world’ (Gerwe & Frojan, 2017, p. 3). It is an American home rental company based in San Francisco that allows ordinary people to list their private accommodation spaces for the widest audience of tourists through its platform. Initially the idea was to create a website to provide airbeds for special events all across the United States and give travelers a chance to network with hosts and other people participating in an event. Now, the website offers a wide range of accommodation, from a shared room to a luxury villa, giving an opportunity to making some extra money from renting out private spaces and meeting interesting people.

Conclusions

- The platform takes full advantage of its market potential and owes its great success to its innovative business model
- capturing value through open innovation provides a huge impact on the company’s performance
- Business Model Canvas can be a great tool used to assess different aspects of operations and implement a successful strategy.

The concept of Business Model Canvas

Business models in global competition must be focused not only on processes inside the firm. Companies should look outside their boundaries for concepts and ideas to bring in or needs for internal solutions to be licensed. There have been many concepts and classifications of business models but the first one to characterize the open business paradigm was Business Model Canvas (BMC) developed by Osterwalder and Pigneur in 2010 (Bonazzi & Zilber, 2014, p. 622). BMC was defined as a model used by companies to create, deliver and capture value from the processes that may occur as both ‘outside in’, i.e. bringing in external ideas, technologies and intellectual property, or ‘inside out’, i.e. selling or licensing them outside of a firm. In this context, The Business Model Canvas consists of nine building blocks that easily define and communicate a business idea of a company and describe the rationale of how an organization works. The segments of BMC are presented in the table below.

<table>
<thead>
<tr>
<th>Segment</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Key Partners</td>
<td>The network of suppliers and partners that makes the business model work</td>
</tr>
<tr>

Canvas Model for Airbnb

BMC is a great tool to have a holistic view of business structure of Airbnb. It provides a full insight on how the platform generates income and helps to understand the importance of implementing the crucial tactic – providing home listings at a global scale. The segments of Airbnb’s business model are depicted in a visual chart below.

A **startup** is a temporary organization or a young innovative enterprise looking for a business model that would provide it with profitable growth.

Eric Ries (American entrepreneur, blogger, and author of "The Lean Startup") defines a startup as an enterprise that was created to create a new product or service in risky and uncertain conditions.

**Purpose of this poster is to draw the attention of viewers and encourage to discussion about work in a startup.**

**In a start-up:**
- Responsibilities often change
- Any problem can be an opportunity for you to take the required situation
- Startup allows you to test yourself in many roles and develop
- Working here is the best training
- Your input and ideas count the most

In our opinion a startup can attract people who are happy to support a given idea financially.

If we have an original idea that also responds to the current needs of consumers, it will certainly meet with interest.

Start it up!
E. Trzeciecka, A. Szewczyk, K. Stefańska
What Polish startups do? Who they cooperate with? Who is their client? The main purpose of this poster is to answer the above questions.

Areas of startup activity in Poland

- Management, productivity: 30%
- Martech: 10%
- Fintech: 11%
- Research tools: 11%
- Internet of things: 14%
- Big data: 15%

The main business model of Polish startups

- B2B: 23%
- B2C: 14%
- B2B & B2C: 14%
- Other: 49%

Conclusions

Startups in Poland want to cooperate with corporations. Almost half of them deal exclusively with B2B sales. The purely consumer model is losing popularity because in the case of B2B you simply earn faster.

82% of surveyed startups submit declarations of willingness to cooperate with a corporation. However, very often the real form of cooperation is different than expected.

Cooperation of polish startups with corporations

WHY AIRBNB BECAME SUCCESSFUL?

THE MILLION DOLLAR IDEA

In 2008 two design students realized that one day they could not pay the rent for their apartment. That week an important design event was held in San Francisco and all of the rooms in every hotel were sold out. Then Brian Chesky Joe Gebbia came up with a brilliant idea: they would set up a website and buy inflatable beds to take advantage of the space they had in their apartments. “Water and bread” for bed and breakfasts. Airbnb. Thus, in 2008, Nathan Blecharczyk was the third to join the project, supporting Brian and Joe in building the website to post the ad. A year later, in 2009, the accelerator Y-Combinator provided them with $20,000 to perfect the model, and soon after, the Sequoia Capital firm, from Menlo Park, injected $100,000. Thus they made a privileged place in the select club of founders of technology startups. Airbnb now has over four million listings in 65,000 cities across 191 countries.

Airbnb is an internet platform for short-term rentals of accommodation directly from private individuals. It is an alternative to hotels, hostels and Guesthouses. Some of the offered accommodations are extremely original. Properties for rent on the Airbnb platform have various standards, location and prices. You can rent a bed in a shared room, a separate room or an entire apartment. You can find not only the ordinary rooms or entire apartments, the owners also rent their private villas with swimming pools, lots in the very center of world metropolises, tree houses, rooms on boats or caravans. As a result, your journey will become even more comfortable and unique.

Prices are set by the hosts individually, according to their preferences, and Airbnb charges a commission for each accommodation reservation via the website.

HOW DOES AIRBNB DIFFERENTIATE?

Safety
Airbnb offers guests a guarantee of up to 30,000 euros, which covers the property in the event of loss or damage caused by theft. Regarding booking, Airbnb suspends the payment of the guest for 24 hours upon arrival, making sure the guest is satisfied.

Wide range
Great customer experience focused on the diversity of residences Airbnb offers accommodation in an apartment, cottage, castle, wooden house built on a tree or yacht.

CORONAVIRUS

With global travel nearly at a standstill, the home-sharing giant has a possible saving grace of losing $1 billion through the first half of the year, and its prime-market valuation is dropping, according to people familiar with the company’s finances. Airbnb’s valuation, in the prime secondary market for shares held by early investors, has dropped from $150 per share a few weeks ago to under $90 a share, valuing the company at less than $30 billion.

When the coronavirus hit China and then Europe, Airbnb’s bookings plummeted. In Beijing, take more than 1,600 bookings were made between March 1 and March 7. However, demand dropped 90% from the Jan. 5 to Jan. 11 period, according to AirDNA, an analytics firm that tracks the short-term rental market. By late March, Airbnb reservations across the USA dropped 80% from about 500,000 a week on March 1 to about 100,000 by the end of the month, according to AirDNA.

CONCLUSIONS

We believe that Airbnb’s success is based on an idea. Seemingly simple, not distinctive, surprisingly, it turned out that the application is very much needed and many people around the world are delighted with it. The most important thing that distinguishes Airbnb as a company is that it has a clear sense of purpose: travel and join the experience, and it’s very easy to use. You should not need instructions to use it. But most importantly, it’s about fun and entertainment. Because people are increasingly rejecting fancy hotels in favor of experience and emotions. Who would not prefer to live in a treehouse or a boat room instead of a boring hotel? All these factors affect the development of the company, which despite several falls bravely faces new problems and moves forward.

ADVANTAGES

Price
When you rent a flat with several people, the costs are much lower than in a hotel. In addition, when renting a hotel you will eat two or three meals in restaurants. In the apartment you can prepare your meal sometimes. The cost of housing outside the city center or in low season also competes with hotel accommodation. You can really save money using Airbnb.

More facilities in less popular destinations.
Hosts from regions where there are not many hotels are advertised in Airbnb. Traveling by car, we can find a hidden pearl somewhere off the main road. On the other hand, there is also a chance for a nice apartment in a great location where expensive objects dominate.

Ease of use
The portal is easy to use. Filtering is great because you can search by neighborhood or on an interactive map. You can also select parking options or places that children or a pet is accepted. It is a very intuitive tool, although it takes many hours to find the right place.

UNLIMITED RENTAL TIME

Despite the fact that Airbnb would like to compete with hotels, their biggest strength is renting for longer. Agencies are not willing to rent premises for a month or two. And living so much time in a hotel would be uncomfortable and more expensive.

DISADVANTAGES

Lack of privacy
Staying in a house where residents are staying all the time can be uncomfortable. Using Airbnb we are no longer as anonymous as in a hotel. Some may be disturbed by direct and constant contact with the owner or other tenants.

No specific location
Usually, the description of the offer does not include a specific address, only the description of the location where the object is located. The map shows a marked area, and from the description you can find out how close it is to the metro station etc. The exact address is known after booking.

Cancelling the reservation by the host
One of the disadvantages of Airbnb is the fact that the owner may cancel our stay a few days before our arrival Airbnb will refund the money. However, few days before our trip there will be no available apartment or hotel. This is the biggest Airbnb problem which practically does not occur in hotels.

No free cancellation
In Airbnb there is a free cancellation option (it is called Flexible cancellation policy), but it depends on the host. Hardly any host chooses it. In addition, if the apartment has a “Flexible” cancellation, they will still not refund the Airbnb service fee.

Misunderstandings with hosts
Unfortunately, there may be a situation when the landlord changes his mind, he wants you to cancel the reservation (because he loses Superhost status by doing this). Or when you rent a room and your roommate is "specific". This prevents many people from using the site.
From startup to cooperation

IN THE TECHNOLOGICAL WORLD, COMPANY DEVELOPMENT IS USUALLY AT ONE OF THREE STAGES: A STARTUP, A COMPANY AT THE GROWTH STAGE, AND A CORPORATION.

1. Startup

In general, a startup can be defined as a company that is very young and its product does not yet meet market expectations. This is a company that is just trying to come up with a product that can start a viable business. Although they have a large shortage of money and time, good startups provide an optimal environment for quickly acquiring the necessary knowledge and skills. Working in a startup, in the face of an indefatigable pursuit of a product-market correspondence, is usually stressful, debilitating and risky. But such an experience can be extremely positive.

2. The company is at a growth stage

Having turned out to be sufficiently competent and successful (usually it is required both), in order to ensure the conformity of “product-market”, the startup starts to solve another equally difficult task - to grow effectively. You need not only to hire new people, but also to figure out how to repeat the success achieved at an early stage, working with new, related products. At the same time, you need to develop your core business as quickly as possible.

3. Corporation

These are companies that have successfully passed the stage of scaling and have begun to build a stable long-term business. Strong technology companies know that in order to continuously create new value for consumers and their own business, they need to constantly innovate. In a corporation, it is most often necessary to support existing directions of development or to promote your ideas, but very gradually, slowly, step by step.

TO GET “FROM STARTUP TO CORPORATION” YOU NEED A LOT OF TIME, EFFORT, DESIRE AND DEVELOPMENT. A HUGE CONTRIBUTION AT THE INITIAL STAGE AND CONTINUOUS IMPROVEMENT OF YOUR BUSINESS WILL HELP TO ACHIEVE SUCCESS IN THE DEVELOPMENT OF FUTURE BUSINESS.

Yuliia Komenotrus

From startup to corporation - technological world
Y. Komenotrus
The aim of this poster is to recognize the main action points, which every entrepreneur needs to take to enter market, as well as drawing attention to the most important qualities, that may have a great impact on possible project failure.

Start-up is a new business entity, which just started its activity and is in the early stages of development. The start-up phase is the period of business growth, when raising capital is the key, as well as presentation of finished goods or services based on developed strategy of introduction of the products to the market. This time is known for high investment risk. The steps that every entrepreneur must take to become the ‘King of the Market’ require a lot of courage. Starting a business is just the beginning of this difficult journey, and each step brings more obstacles to overcome. Facing these adversities makes the journey a great success. Are you brave enough to get on this wonderful journey with us?

Startup is not only a great idea, but also a lot of work and effort to turn your passion into a prosperous business. Many startup creators face difficulties due to unawareness or insufficient preparation of project assumptions, which then often determine ‘to be or not to be’ of the entire startup. What to avoid and what to look for?
Therefore, we can list the five traits every entrepreneur should have: passion over money, resilience, because entrepreneurial efforts can fail, a strong sense of self, because starting something from scratch isn’t easy, flexibility, because you have to adjust as you build your vision, and of course - vision.

As the results of the study shows, there are five key factors that stop adult Poles from starting startup companies. Those are:
- lack of faith in one’s own skills (43%),
- lack of skills related to organization and management of the company, which are necessary to start business (40%),
- lack of start-up capital (40%),
- lack of industry and specialist knowledge (37%),
- no specific idea for the company (33%).

After careful analysis of all gathered information, start-up is a perfect enterprise for the ones that are brave and not afraid of taking a risk. The key to the success is to have a bright idea and the thing that cannot be missing is determination at every step towards your dream goal.
How important is good product development for a growing company?

To develop a product that sells and brings a company substantial profit for its development, companies not only have to conduct a market research, they also need to understand consumers and their needs. Sometimes they go as far as to analyze people’s automatic, primal behaviors and habits in order to develop a successful product. An example is such company is an American corporation Procter & Gamble that created a product called “Febreze” - a spray air refreshment that became a world phenomenon and transformed into a business worth millions of dollars. To achieve such success they conducted a lot of research and used habitual desires and customer trends in order to market and appropriately present the product to their potential customers.

Initially the product called “Febreze” was a flop and the company could have lost millions of dollars on developing it. At the beginning stages of the product development, Procter & Gamble had introduced “Febreze” to selected shops but no one wanted to buy it despite the fact that the product worked and was good at masking bad smells. Procter & Gamble’s representatives were trying their best to promote the product giving out samples and conducting interviews with local people to understand how “Febreze” could make their lives better. The “Febreze” team almost lost hope and was facing group layoffs. Fortunately one interview changed how the team perceived “Febreze”. The company representatives met a lady that was working as a guard in a national park. She claimed that “everything in her life smelled like a skunk” and because of that no one wanted to visit her or be with her. She was very unhappy before she found out about “Febreze” because she could not get rid of bad smells from her life. Everything changed after she bought a product. The lady expressed gratitude towards the company representatives for developing a product that changed her life for the better. It was a breakthrough moment for the team working on “Febreze” in that moment they realized they will earn a lot of money.

After the interview with the woman, they focused on a marketing campaign that was supposed to target people’s basic habits and desires. They realized that the key to selling “Febreze” was to show the obvious reward that came from using it and focus on a clue - like dog laying on the couch in the hall. They created commercials showing beautifully smelling house or people that get rid of the cigarette smell from their clothes by using “Febreze”. Deeper understanding of people’s needs and desires enabled them to make this simple product a business worth millions of dollars.

Achieving growth through product development

A main source of business growth is through product innovation. In order to have new products, there have to be a lot of research made and a lot of ideas generated. An idea is a plan, a scheme, a way for doing something. But most importantly by their very nature ideas are creative and providing answers to problems. They help to meet the needs of customers and they also make products distinctive from those of the competition.

New product can be launched at any stage of company development. But corporations have an edge over startups and middle-sized companies if it comes to introducing and developing new products having much more resources, man power and experience. However, each organization needs to go through several stages of product development process to release the product:

- Idea generation
- Idea screening - best ideas are chosen from the pool of ideas
- Idea strategy development
- Product development - building a prototype
- Commercialization - final briefing and strategy formulation
- Testing the prototype of the product
- The product is introduced to the market

To sum up, achieving company growth at any level of business development requires thoughtful product development process to be able to bring company to a new level. There is no company growth without successful products and product diversification.

The main goal of the poster is showing what the startup must do to developed and become corporation.

**CORPORATION** - a legal entity that is separate and distinct from its owners. Corporations enjoy most of the rights and responsibilities that individuals possess: they can enter contracts, loan and borrow money, sue and be sued, hire employees, own assets, and pay taxes. Some refer to it as a "legal person."

**DEVELOPMENT**
The purpose of development is a rise in the level and quality of services, work and the creation or expansion of income and employment opportunities.

**HUMAN RESOURCES**
The most important in business: the team. You can't create a company by yourself. You will always need help. Sometimes it will be the outsourcing of services, often the need to hire employees.

**LAW**
Each enterprise must have some legal form. The ground is choosing the right one.

**BUSINESS FINANCING**
Is the process of providing funds for business activities, making purchases, or investing.

**MARKETING**
To achieve success, we must advertise.

**MOTIVATION**
It is important not only what you do, but also why you want to do it. Motivation and keep going even when everyone tells you to stop or when people cease to believe.

**BUSINESS IDEA**
A business idea is the key to success, you need to think about it.

The term startup refers to a company in the first stage of its operations. Startups are founded by one or more entrepreneurs who want to develop a product or service for which they believe there is a demand. These companies generally start with high costs and limited revenue which is why they look for capital from a variety of sources such as venture capitalists.

Objective: Is it possible to achieve international SUCCESS immediately, or do you need a GOOD IDEA, solid and consistent work and perseverance at first?

The most popular small business financing methods in 2018 were:
- Personal funds 77%
- Bank loan 34%
- Borrowing from family/friends 16%
- Other funding 11%
- Donations from family/friends 9%
- Online lender 4%
- Angel investor 3%
- Venture capital 3%
- Crowdfunding 2%

82% of successful business owners admit they have the right qualifications and backed up experience to run a company, even with limited cash flow.

Small Business Trends

It only takes six days to start a business in the United States.

Dynado

1 in 2 begin their small business with less than $5,000.

Small Business Trends

In 2018, startups created over 2 million jobs in the U.S. alone.

U.S. Census Bureau

Beginning of Startup

First Investor

International Competition

More Investors

Corporation

Top 10 causes of small business failure:
- No market need: 42%
- Ran out of cash: 29%
- Not the right team: 23%
- Got outcompeted: 19%
- Cost issues: 18%
- User un-friendly product: 17%
- Product without a business model: 17%
- Poor marketing: 14%
- Ignore customers: 14%
- Product misstimated: 13%

How to build a successful startup?
- Determination
- Start with a solid plan
- Enough time
- Human Resources
- Get finance
- Create marketing
- Begin networking as soon as possible
- Surround yourself with the right people
- Stay ahead of everyone else
- Maintain a balance between work and and life

Conclusion:
1. Startups start with an idea.
2. Startups don’t do projects. They build products.
3. If you want to build a successful business, you need to be focused on a single goal.
4. Lots of corporations were startups at first. They did not have a lot of capital, they tested their ideas among friends and relatives. The success of those startups would be impossible if it wasn’t for their huge time contribution, high motivation, open mind, good marketing and persistent pursuit of the goal.

From startup to corporation
K. Kowalewski, M. Klocek
From innovation to cosmic effects

In Poland, startup development opportunities are used to a lesser extent than in highly technologically developed countries, such as the USA. There are 175 unicorns in Asia (startups valued above USD 1 billion), in the USA 115, in Europe 30 in Europe, and in Poland there are none.

Are we able to strengthen the development of innovation in Poland? What are the possible solutions?
- Building a knowledge-based economy that produces advanced products and services.
- Using EU funds to develop startups.
- Using support from business angels or venture capital funds and other forms of assistance e.g. bank loans.
- PARP programs that enable startups to support experts and allow a non-returnable grant of up to PLN 1 million.

-Problems of Polish startups
- Companies finance their development primarily from their own resources. This is a safe approach, but at the same time inhibiting the growth rate. Own resources are usually very limited and are not always sufficient to meet all needs.
- Even 50-80 percent startups in such an initial phase fail.
- Polish startups must face legal, staff and, above all, financial barriers.
- 60% Polish startups currently have no foreign customers, activity on markets outside Poland is currently declared by only 39 percent. Polish startups.

REMEMBER ABOUT
1. MOTIVATION 2. BUSINESS IDEAS 3. FINANCES 4. MARKETING
5. PR - public relations 6. LAW 7. HR, or people

Conclusions:
- Many business owners believe that the lack of funds prevents their businesses from growing. You need to have a lot of knowledge to organize your investment portfolio well. Polish innovators must effectively use all available sources of support.
- Startups should strengthen promotional activities on the domestic market and abroad.
- Expert support and research assistance gives much better results for the work of innovators.

M. Klaś
Silicon Valley is a region in the southern part of the San Francisco Bay Area in Northern California that serves as a global center for high technology, innovation, venture capital, and social media. How it all started? How start-ups turned into global corporations? What are the most important events in the history of IT companies based in Silicon Valley?

The development of IT companies in Silicon Valley began in the 1930s with the founding of Hewlett-Packard (HP) in 1939 by David and William Hewlett, and Intel in 1968 by Gordon Moore and Robert Noyce. Apple was founded in 1976 by Steve Jobs and Steve Wozniak, and Google was founded in 1998 by Larry Page and Sergey Brin.

In 2004, Facebook was founded by Mark Zuckerberg. In 2007, Apple released the first iPhone, which revolutionized the smartphone industry. In 2012, Facebook reached 1 billion users.

The 20th and 21st century was a time of rapid growth of IT companies in the Silicon Valley. Many discoveries and inventions in the 20th century, like microprocessors, served as a base for future development. At the turn of the century, many new start-ups emerged and within several years, turned into worldwide corporations. Last years were a period of great inventions, like widely available electric cars, but also a time of growth of social media influence.

About the future, we know one thing...

... it is bright!
Positive aspects of startups
S. Pasternak, D. Polewska, E. Szczyrbak

Does being small mean being week?
The aim of the poster is to present the key advantages small businesses have over large competitors. Being small does not mean being on the lost position. Why would you resign from developing our own ideas by setting your own small company because of the huge competition from big corporate competitors. One should consider number of positive aspects of being the small one. Lot of them big corporations wish to have.

Customer expectations
Large companies’ mass-market customers are unforgiving, whereas target audience for startups are early adopters seeking for innovation even at the cost of loss.

Brand flexibility
A startup can change the way it presents itself and its products or services, meaning it can even change the name whereas large companies don’t have this flexibility.

Legal barriers
Corporations are motivated to construct legal barriers, to protect their businesses from competition. Startups do not follow such rules, being strongly supportive to each other.

On the rise
There are 472 Million entrepreneurs worldwide with 100 million startups opening each year. Out of these 1.35 million are tech startups.

Be brave start your own startup today!
